

Program authority: Nuevo Estándar Biotropical – NEBIOT S.A.S.

Ex-Post Outcome Report

Monitoring-period account and verification submission

Governing standard: NEBIOT 0.8.2 | Template edition 1.2

[PROJECT NAME]

Project ID: [ID]

Country / jurisdiction: [Country / jurisdiction]

Project document version: [Version]

Issue date: [YYYY-MM-DD]

Implementing organizations and stakeholders

IMPLEMENTING ENTITY

[Insert authorized logo]

[Organization / role]

PROJECT PROPONENT

[Insert authorized logo]

[Organization / role]

RIGHTS HOLDERS / STAKEHOLDERS

[Insert authorized logo]

[Organization / role]

Use authorized logos and identify each organization's actual role. Logo display does not establish consent, project ownership, endorsement, validation or admission. Remove unused partner spaces from the completed submission.

The English logo wording is a translation, not a separate legal entity.

License and use of this template

This document is issued by Nuevo Estándar Biotropical—NEBIOT S.A.S. Henry Arellano-Peña is the methodological author of NEB001 and NEB002. Rights in NEBIOT’s protected materials remain with their respective rights holders. Commercial use, reproduction, adaptation, redistribution, and sublicensing of protected material are subject to the applicable license or specific written permission from the authorized rights holder; permissions for use within the NEBIOT program shall be recorded in FRM-07 under S-21. Access to this document does not itself grant a commercial license, transfer ownership, authorize sublicensing, confer program admission, or authorize certification or issuance of environmental units. Supporting publications and third-party data, software, and images retain their respective licenses and attribution requirements; existing lawful permissions and uses permitted by applicable law remain unaffected. Authorized independent reviewers shall receive the access necessary for inspection, recalculation, and reporting under S-22, subject to the applicable permissions and confidentiality safeguards.

Completion instructions

This template organizes the evidence required for its project stage under NEBIOT Standard version 0.8.2. It does not replace the standard, its applicable methods, the approved case profile or the controlled forms. Complete the bracketed fields and expand tables or narrative areas as needed. For an inapplicable item, record a reason and the reviewer’s disposition; do not silently delete it. Identify unknown information as missing, not zero. Keep observations, assumptions, projections, verified outcomes and authorized NVEUs distinct. Requirements are assessed at the stage to which they apply; later-stage fields do not imply earlier completion.

Reference and scope

[1] NEBIOT. NEBIOT Standard, controlled version 0.8.2. NEB-DOC-000, integrated edition. Principal dependencies: NEB-CYC-001; NEB-STD-001 and Annex A; NEB-MTH-001/002; NEB-UNT-001; NEB-PRO-001; NEB-MIG-001; NEB-AUD-001; and NEB-FRM-001. All clause, equation, AP and FRM references in this template refer to that version. They are external normative dependencies, not missing sections of this template. NIP retains the source name Nota de Idea de proyecto; “Project Idea Note” is an explanatory English rendering. PD means Project Description. NEBIOT provides the contracted technical assessment, design and monitoring services. The named proponent and implementing entity retain project execution responsibilities under S-25; exceptional NEBIOT interests follow S-26.

01	Period, evidence cut-off and assessment status	4
02	Monitoring implementation and spatial observations	5
03	Counterfactual retained for the monitored interval	6
04	Actual project account and implementation emissions	7
05	Observed offsite activity and attributable leakage	8
06	Pool transfers, delayed release and physical units	9
07	Signed period account and conservative quantity	10
08	Liabilities, reserve and conditional NVEU request	11
09	Ex-ante to ex-post comparison	12
10	Continuing additionality, safeguards and separate outcomes	13
11	Migration, prior claims and evidence continuity	14
12	Evidence index, independent review and decision	15
CALC	Calculation traceability and notation	16

01 Period, evidence cut-off and assessment status

[1] Basis: P-01; P-02; CYC-06; S-18; U-01

Exact account identity

Identify the monitoring interval, project and boundary versions, data cut-off, previous report and applicable methods. Distinguish observed inputs, modeled conversions, the retained counterfactual, reported quantities, OVV-verified scope and separately authorized results. The report title does not establish verification.

[Enter response and exact evidence references.]

Status and period record

Record / scope	Start, end and evidence cut-off	Submitted, assessed or authorized status
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Period continuity

Show included intervals, excluded intervals and any overlap with earlier reporting. Preserve negative results and unresolved obligations. A new workbook or a migration date does not restart project age or erase earlier claims.

[Enter response and exact evidence references.]

02 Monitoring implementation and spatial observations

[1] Basis: P-02; P-03; P-04; T-03; AO-09; MIG-14; FRM-08

Observation register

EXPOST-T04 / Calculation notation

$$x_{\ell} [u_{\ell}]$$

x_{ℓ} is the identified observation, input, or output; u_{ℓ} is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Variable / location / date x_{ℓ}	Method, value, unit and source ID u_{ℓ}, t	Quality control, missing data and uncertainty source(x_{ℓ})
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Changes and comparability

Document imagery dates, class definitions, error-adjusted area estimation or the approved alternative, class transitions and field/reference checks. Net class-area differences alone do not identify gross deforestation, degradation or recovery. Keep any allocation of multi-year change separate from observations at their actual dates.

[Enter response and exact evidence references.]

Deviations from the monitoring plan

EXPOST-T05 / Calculation notation

$$x_{\ell} [u_{\ell}]$$

x_{ℓ} is the identified observation, input, or output; u_{ℓ} is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Planned procedure x_{ℓ}	Actual implementation and reason u_{ℓ}, t	Effect / remedy / approval source(x_{ℓ})
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

03 Counterfactual retained for the monitored interval

[1] Basis: S-07; S-18; P-13; F-B01; F-B02; MIG-05

Baseline is not an observation

State which approved baseline applies to the actual interval and comparable scope. Identify original and restated versions, eligibility caps and reassessment decisions. Observed project data do not convert baseline emissions into measured emissions.

[Enter response and exact evidence references.]

Period baseline components

EXPOST-T06 / Calculation notation

$$N_{BL,t} = \sum_{\ell \in \mathcal{I}_{BL,t}} q_{\ell,BL,t}$$

Baseline inputs belong to the approved counterfactual and matched period. Do not enter a subtotal that already deducts project emissions as N_BL and deduct those emissions again. Define each driver, pool, and gas and keep the original cell expression.

Basis: M04.4; M04.5; P-13.

Workbook: Components!D=BL; ExAnte!F; ExPost!F.

Driver / stratum / pool ℓ, i, t	Period quantity and calculation evidence $q_{\ell,BL,t}$	Retained or changed / approval reference $N_{BL,t}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Change effects

Explain effects on baseline, project and leakage consistently. Show the original comparison before presenting a corrected one. Do not selectively raise only the baseline when changing a carbon factor or map.

[Enter response and exact evidence references.]

04 Actual project account and implementation emissions

[1] Basis: P-02; P-04; F-P02; F-C01; F-C02; T-08; S-25

Project emissions and removals

EXPOST-T07 / Calculation notation

$$N_{s,t} = E_{\text{CO}_2,s,t} - R_{\text{CO}_2,s,t} + \sum_{g \neq \text{CO}_2} \text{GWP}_g E_{g,s,t}$$

s is BL or PJ; E is emissions and R is CO2 removals. Record gas-specific masses and the adopted characterization source and horizon. Do not characterize an already characterized CO2e quantity again. The workbook imports these qualified component calculations.

Basis: M04.4; AP-07.

Workbook: Components!F:L; Profile!B17.

Activity / pool / gas <i>s, g, t</i>	Observed input and modeled conversion <i>E_{g,s,t}, R_{CO₂,s,t}</i>	Signed period quantity / evidence <i>N_{s,t}, GWP_g</i>
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Substantiated zero and exclusions

For every zero or excluded source, give monitoring coverage, detection capability, observation evidence and the applicable exclusion or conservative treatment. A blank source, an effectiveness factor multiplied by zero or an absent model result does not by itself demonstrate zero emissions.

[Enter response and exact evidence references.]

Implementation evidence

Intervention / executing entity	Date, location and evidence	Expected response / observed response
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

05 Observed offsite activity and attributable leakage

[1] Basis: S-09; F-L01; P-04; T-08; T-16

Leakage reconciliation

EXPOST-T09 / Calculation notation

$$\widehat{L}_t = N_{\text{PLKA}, \text{with}, t} - N_{\text{PLKA}, \text{without}, t}$$

The two accounts have matched geography, activities, gases and intervals. Any source ratio remains an explicit numerator/denominator, not an assumed percentage. A signed diagnostic does not automatically authorize an extra benefit; the applicable attribution profile governs.

Basis: F-L01; T-08.

Workbook: Components!D=LK; ExAnte!H; ExPost!H.

Receiving area / mechanism <i>t</i> , PLKA	Observed and without-project activity $N_{\text{PLKA}, \text{with}, t}$, $N_{\text{PLKA}, \text{without}, t}$	Attributable difference / model / evidence $\widehat{L}_t$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Consistent exclusions and adjustments

Distinguish ambient offsite losses from project-induced displacement. Reconcile survey/model adjustments and previously counted components. Explain any change from the forecast and any zeroing of a previously positive component.

[Enter response and exact evidence references.]

Remaining uncertainty

EXPOST-T10 / Calculation notation

$$u_Q^2 = u_B^2 + u_P^2 + u_L^2 - 2 \text{Cov}(B, P) - 2 \text{Cov}(B, L) + 2 \text{Cov}(P, L)$$

B, P and L in this variance identity denote baseline, project and leakage estimators, not reserve B_t. Standard uncertainties are in t CO₂e; variances and covariances are squared units. Retain shared-source dependence and a valid covariance matrix.

Basis: F-U01; M05.1; M05.2.

Workbook: Qualified uncertainty calculation; ExAnte!J:L; ExPost!J:L.

Source / limitation <i>B</i> , <i>P</i> , <i>L</i>	Bound or quantified uncertainty u_B , u_P , u_L , Cov	Net-account effect / follow-up u_Q^2 , Q_t^{low}
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

06 Pool transfers, delayed release and physical units

[1] Basis: M04.1; M04.2; M04.4; F-C03a; F-C03b; F-C05a; F-C05b; F-C05c

Cohort and pool continuation

EXPOST-T11 / Calculation notation

$$E_{i,t}^{\text{CO}_2} = \frac{44}{12} \sum_{\tau \leq t} \sum_o A_{i,\tau} \ell_{io,\tau} k_{io,\tau}(t)$$

A is newly affected ha, ell is allocated Mg C/ha, and k is the fraction released as CO2 in interval t. The sum of fractions cannot exceed its defined allocation. Cohorts and pools are disjoint; keep remaining material and pre-period cohorts. Use exact intervals.

Basis: M04.2; F-C03a; F-C03b; F-C04.

Workbook: Upstream cohort schedule; Components!F:L.

Pool / event / original interval <i>i, o, τ</i>	Opening stock, release and retained bal- ance <i>A_{i,τ}, ℓ_{io,τ}</i>	No-double-counting check / evidence <i>k_{io,τ}(t), E_{i,t}^{CO₂}</i>
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Conversions and time support

State whether each factor is biomass, carbon, CO2 or CO2e; retain the gas-specific GWP reference. Check kg-to-tonne and C-to-CO2 conversions separately. Preserve delayed releases inherited from earlier events even after migration. Use one coherent stock-change or event-release pathway for the same loss.

[Enter response and exact evidence references.]

07 Signed period account and conservative quantity

[1] Basis: M04.5; M05; F-U01; F-A01; F-A02; F-R01; FRM-02

Net environmental result

EXPOST-T12 / Calculation notation

$$\widehat{Q}_t^z = N_{BL,t}^z - N_{PJ,t}^z - L_t^z, \quad z \in \{EA, EP\}$$

EA denotes the dated forecast; EP denotes the reporting-period account, not automatic verification. All terms are signed period masses on matched support. The quantity is before uncertainty, previous liabilities, reserve, and denomination.

Basis: M04.5; F-R01.

Workbook: ExAnte!F:I; ExPost!F:I.

Period / scope t, z	Baseline / project / leakage (t CO2e) $N_{BL,t}^z, N_{PJ,t}^z, L_t^z$	Signed net result / workbook location $\widehat{Q}_t^z$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Conservativeness and materiality

EXPOST-T13 / Calculation notation

$$Q_t^{\text{low}} = \widehat{Q}_t - k_{1-\alpha} u_{Q_t}$$

$$Q_t^{\text{low}} = \widehat{Q}_t - \delta_t \quad (\text{DEDUCTION}); \quad Q_t^{\text{low}} = q_t^{\text{bound}} \quad (\text{BOUND})$$

delta is the justified deduction (DEDUCTION route); BOUND supplies the supported lower value directly. The second displayed line describes the workbook interface, not a new approved estimator. Record the upstream uncertainty or evidence-bound procedure and decision.

Basis: M05.3; F-A02; AP-08.

Workbook: ExAnte!J:L; ExPost!J:L; ExPost!O.

Component / dependence / bias t, δ_t	Approved deduction or supported bound $u_{Q_t}, k_{1-\alpha}$	Q_low and separate materiality findings Q_t^{low}
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Completeness and adverse outcomes

Show positive and negative results before the nonnegative eligible portion. Record missing inputs as missing. The uncertainty method and materiality screen are separate. Report both the assessed scope and any withheld scope.

[Enter response and exact evidence references.]

08 Liabilities, reserve and conditional NVEU request

[1] Basis: F-03; F-R03; F-R04; F-R05a; F-R05b; U-01; U-07; FRM-02/C; FRM-09

Candidate allocation versus executed settlement

EXPOST-T14 / Calculation notation

$$Q_t^{\text{eligible}} = \max(0, Q_t^{\text{low}}), \quad D_t^{\text{cand}} = \min(D_t, Q_t^{\text{eligible}})$$

$$Q_t^{\text{base,cand}} = Q_t^{\text{eligible}} - D_t^{\text{cand}}, \quad J_t^{\text{cand}} = Q_t^{\text{base,cand}} - B_t$$

cand distinguishes a worksheet proposal from an executed posting. D_set is actual evidenced settlement; D_rem = D - D_set. Do not reduce posted liability by D_cand. A larger required reserve than the candidate base is a shortfall, not funded protection. No rounding is implied.

Basis: M05.4; M05.5; F-R03.

Workbook: Settlement!B:L; ExAnte!M:O (forecast only).

Opening liability / settlement candidate D_t, Q_t^{low}	Actual settlement and execution evidence $D_t^{\text{cand}}, D_t^{\text{set}}$	Post-liability base / new reserve / available mass $Q_t^{\text{base,cand}}, B_t, J_t^{\text{cand}}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Deficit and closing liability

EXPOST-T15 / Calculation notation

$$N_t^- = \max(0, -Q_t^{\text{low}}), \quad \Delta D_t^- = N_t^- - O_t - C_t^-$$

$$D_{t+1} = D_t^{\text{rem}} + \Delta D_t^-$$

FULL_BOUND only when expressly adopted. O is a documented previously recognized portion of the same deficit; C_minus is executed reserve cancellation for a disjoint portion. Require O+C_minus <= N_minus. A negative uncertainty bound is not automatically a physical reversal.

Basis: F-R05a; F-R05b; F-03.

Workbook: CarryForward!B:J; Settlement!L.

Negative result / applicable profile Q_t^{low}, N_t^-	Prior recognized overlap / executed cancellation O_t, C_t^-	New deficit, closing balance and next-period link $\Delta D_t^-, D_{t+1}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Units and authorizations

Use NVEU only for the applicable authorized category. State denomination and increment if approved; otherwise retain physical quantities. A computed candidate is not issuance. Distinguish reserve required, reserve funded, reserve canceled, denomination residuals and other external carbon units.

[Enter response and exact evidence references.]

09 Ex-ante to ex-post comparison

[1] Basis: P-13; P-14; S-18; M04.5; F-R01

Matched comparison

EXPOST-T16 / Calculation notation

$$\Delta Q_t = Q_t^{\text{EP}} - Q_t^{\text{EA}}$$

$$\Delta Q_t = \Delta N_{\text{BL},t} - \Delta N_{\text{PJ},t} - \Delta L_t$$

All deltas are EP minus the frozen EA value on the same support before uncertainty and reserve. $r = \text{deltaQ} - (\text{deltaBL} - \text{deltaPJ} - \text{deltaL})$ is an arithmetic residual. A forecast difference is not itself mitigation, causation, or a materiality finding.

Basis: M04.5; P-13; comparison identity.

Workbook: Comparison!D:J.

Period / same scope / same unit t, z	Frozen ex-ante / reported ex-post $Q_t^{\text{EA}}, Q_t^{\text{EP}}$	Difference and component explanation $\Delta Q_t, r_t$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Explain the difference, do not force agreement

Separate actual performance, revised activity data, changed carbon factors, scope/time harmonization, uncertainty, reserve and prior-liability effects. Preserve the original forecast even when a harmonized comparison is needed. An arithmetic identity does not demonstrate that a method change was justified.

[Enter response and exact evidence references.]

Subperiod distributions

EXPOST-T17 / Calculation notation

$$Q_{t,m} = w_{t,m} Q_t, \quad w_{t,m} \geq 0, \quad \sum_m w_{t,m} = 1$$

$$r_t^{\text{alloc}} = \sum_m Q_{t,m} - Q_t$$

m is a child reporting interval, not automatically a measured month. The same parent and basis must be used for all weights. Do not add a parent total to its allocated children. Retain negative signs and explain unequal-duration allocations.

Basis: F-R01; allocation identity.

Workbook: Allocation!C:I.

Parent period / verified or reported status t, m	Allocation weights and justification $w_{t,m}, Q_t$	Closure / no overlapping claims $Q_{t,m}, r_t^{\text{alloc}}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

10 Continuing additionality, safeguards and separate outcomes

[1] Basis: AO-05; AO-06; AO-08; AO-10; T-10; P-04

Continuation assessment

Intervention / initial premise	Implementation and intermediate evidence	Outcome evidence / continuing conclusion
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Safeguards and competing explanations

Record rights/consent changes, complaints, benefit-sharing, interacting initiatives, disturbances and alternative explanations for outcomes. Report social and biodiversity indicators in their own units; do not add them to the carbon result.

[Enter response and exact evidence references.]

11 Migration, prior claims and evidence continuity

[1] Basis: MIG-02; MIG-05; MIG-06; MIG-07; MIG-08; MIG-09; MIG-12; AO-11

Origin and previous status

EXPOST-T19 / Calculation notation

$$\Delta q_{\text{basis}} = q^{\text{harm}} - q^{\text{src}}, \quad \Delta q_{\text{method}} = q^{\text{NEB}} - q^{\text{harm}}$$

$$q^{\text{NEB}} - q^{\text{src}} = \Delta q_{\text{basis}} + \Delta q_{\text{method}}$$

src retains the original result; harm is the original method on the agreed comparable basis; NEB is the receiving-method result on that basis. This telescoping identity explains differences, not eligibility. Do not force the methodological difference to zero.

Basis: MIG-05; P-13; reconciliation identity.

Workbook: Migration!E:K.

Outcome / original program / period <i>t, u</i>	Issued, used, retired, canceled or unissued record $q^{\text{src}}, q^{\text{harm}}, q^{\text{NEB}}$	Claim intersection / liability / decision $\Delta q_{\text{basis}}, \Delta q_{\text{method}}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Migration reconciliation attachment

Attach the Migration Reconciliation template where applicable. Preserve original results and restrictions; state the receiving method and cutover date. Cancellation of other external carbon units alone does not authorize NEBIOT replacement issuance.

[Enter response and exact evidence references.]

12 Evidence index, independent review and decision

[1] Basis: P-05; P-06; P-09; P-12; P-14; A-12; FRM-03; FRM-06

Findings and closure

Requirement / finding / evidence	Proponent response / correction	Uninvolved assessment / closure reference
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Evidence and separate decisions

Attach original and updated calculation records, raw/reference observations, monitoring deviations, liability records and the OVV opinion when available. A completed response is not independent closure. Keep reported, verified and authorized quantities in separate signed records.

[Enter response and exact evidence references.]

Submission and assessment

Role / organization	Name, date and signature	Quantity, scope, status and authority
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

CALC Calculation traceability and notation

[1] Basis: F-01; T-01; P-13; FRM-02; FRM-04; NEB-MTH-002

Record each calculated quantity as a uniquely identified row. Retain the exact source expression and a separate expression for any NEBIOT adaptation. A translated label does not change a formula. Units, included pools, sign convention, observation period, input status, and mathematical domain are part of the calculation record. An administrative table does not need an invented equation. Source-defined variables that remain ambiguous require clarification rather than an assumed meaning.

Indices and status

EA / EP: dated forecast / reporting-period account; t : interval; i, j : declared strata or classes; o : disjoint organ or pool; g : gas; τ : disturbance cohort; ℓ : calculation/component row.

One calculation record – repeat for each result

Field	Record
Calculation row / symbol	[Complete]
Definition and intended use	[Complete]
Exact source file / version / fingerprint	[Complete]
Worksheet / cell or raw record ID	[Complete]
Original expression and original unit	[Complete]
Inputs: symbols, values, units and periods	[Complete]
Receiving equation / standard identifier	[Complete]
Transformation, conversion and rationale	[Complete]
Unrounded intermediate and final values	[Complete]
Report table / row / output location	[Complete]
Recalculation difference / tolerance basis	[Complete]
Independent reviewer / finding / disposition	[Complete]

Arithmetic comparison, not materiality

$$\delta_{\ell} = v_{\ell}^{\text{recalc}} - v_{\ell}^{\text{reference}}$$

$$|\delta_{\ell}| \leq \varepsilon_a + \varepsilon_r |v_{\ell}^{\text{reference}}|$$

The absolute tolerance has the result unit; the relative tolerance is dimensionless. Record both explicitly. They are software-comparison settings, not approved materiality thresholds. Compare unrounded values. First reproduce the source method; then show each accepted change separately. Do not force an adapted methodological result to equal the source.
