Project document version: [Version]

Issue date: [YYYY-MM-DD]

Implementing organizations and stakeholders

IMPLEMENTING ENTITY

[Insert authorized logo]

[Organization / role]

PROJECT PROPONENT

[Insert authorized logo]

[Organization / role]

RIGHTS HOLDERS / STAKEHOLDERS

[Insert authorized logo]

[Organization / role]

Use authorized logos and identify each organization's actual role. Logo display does not establish consent, project ownership, endorsement, validation or admission. Remove unused partner spaces from the completed submission.

The English logo wording is a translation, not a separate legal entity.

License and use of this template

This document is issued by Nuevo Estándar Biotropical—NEBIOT S.A.S. Henry Arellano-Peña is the methodological author of NEB001 and NEB002. Rights in NEBIOT’s protected materials remain with their respective rights holders. Commercial use, reproduction, adaptation, redistribution, and sublicensing of protected material are subject to the applicable license or specific written permission from the authorized rights holder; permissions for use within the NEBIOT program shall be recorded in FRM-07 under S-21. Access to this document does not itself grant a commercial license, transfer ownership, authorize sublicensing, confer program admission, or authorize certification or issuance of environmental units. Supporting publications and third-party data, software, and images retain their respective licenses and attribution requirements; existing lawful permissions and uses permitted by applicable law remain unaffected. Authorized independent reviewers shall receive the access necessary for inspection, recalculation, and reporting under S-22, subject to the applicable permissions and confidentiality safeguards.

Completion instructions

This template organizes the evidence required for its project stage under NEBIOT Standard version 0.8.2. It does not replace the standard, its applicable methods, the approved case profile or the controlled forms. Complete the bracketed fields and expand tables or narrative areas as needed. For an inapplicable item, record a reason and the reviewer’s disposition; do not silently delete it. Identify unknown information as missing, not zero. Keep observations, assumptions, projections, verified outcomes and authorized NVEUs distinct. Requirements are assessed at the stage to which they apply; later-stage fields do not imply earlier completion.

Reference and scope

[1] NEBIOT. NEBIOT Standard, controlled version 0.8.2. NEB-DOC-000, integrated edition. Principal dependencies: NEB-CYC-001; NEB-STD-001 and Annex A; NEB-MTH-001/002; NEB-UNT-001; NEB-PRO-001; NEB-MIG-001; NEB-AUD-001; and NEB-FRM-001. All clause, equation, AP and FRM references in this template refer to that version. They are external normative dependencies, not missing sections of this template. NIP retains the source name Nota de Idea de proyecto; “Project Idea Note” is an explanatory English rendering. PD means Project Description. NEBIOT provides the contracted technical assessment, design and monitoring services. The named proponent and implementing entity retain project execution responsibilities under S-25; exceptional NEBIOT interests follow S-26.

01 Feasibility mandate and prior-stage reconciliation

[1] Basis: CYC-01; CYC-04; S-18; S-25; FRM-06

Incoming records and changes

Prefeasibility / decision ID	Condition, finding or change	Evidence of closure / impact
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Selected design and scope of feasibility

Identify the selected activities, ecosystem and study boundaries, methods considered, intended attributes and funded investigations. Distinguish what has actually been tested from planned work.

[Enter response and evidence references.]

Decision criteria

Reference the approved application profile and case-specific acceptance criteria. Record thresholds and their approval evidence; do not infer them from examples.

[Enter response and evidence references.]

02 Authority, responsibilities and implementation rights

[1] Basis: S-04; S-05; S-12; S-25; S-26; AO-02; AO-03; FRM-07

Responsibility and authorization register

Role	Entity / named lead	Mandate, scope and evidence
Project proponent	[Complete]	[Complete]
Rights holders	[Complete]	[Complete]
Implementing entity	[Complete]	[Complete]
NEBIOT technical lead	[Complete]	[Complete]

Rights and legal applicability

Right / obligation / instrument	Holder, scope and validity	Evidence / unresolved issue / action
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Conflicts, permissions and responsibility gaps

Record lawful access, protected-material permissions, affected consent and any exceptional NEBIOT interest. Assign execution, finance, monitoring, incidents and remedy without gaps.

[Enter response and evidence references.]

03 Boundary, strata and qualified spatial inputs

[1] Basis: S-03; S-06; T-03; MIG-13; MIG-14; MIG-15; FRM-04/M

Project map / spatial evidence

Insert a readable project map. Identify boundary version, coordinate reference system, scale, observation date, data source, legend and restrictions on disclosure. A screening map does not establish rights or an outcome boundary.

[INSERT PROJECT MAP]

Area and strata reconciliation

FEASIBILITY-T06 / Calculation notation

$$A_{i,t} = \frac{n_{i,t} a_{\text{cell}}}{k_A}, \quad k_A = 10^4 \text{ m}^2 \text{ ha}^{-1}$$

n is a pixel count; a_cell is pixel area in m2; A is area in ha. The PIXELS route uses the displayed geometric conversion. Direct area is a documented input. Net class change is not gross deforestation.

Basis: M01; MIG-13; MIG-14.

Workbook: Spatial!F:I; Profile!B15.

Domain / stratum / mask <i>i, t</i>	Area, unit and boundary version <i>A_{i,t}, n_{i,t}, a_{cell}</i>	Overlap, exclusions and evidence mask, scope
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Data identity, temporal bridge and independent assessment

Attach product passports with bands, units, measurement support, dates, transformations, forest definitions, event interpretation and independent reference evidence. Explain retained and replaced inputs.

[Enter response and evidence references.]

04 NEB001 characterization and classification evidence

[1] Basis: T-01; T-02; T-03; T-06; T-07; T-21; T-22; FRM-08

Observed vegetation and sampling

FEASIBILITY-T07 / Calculation notation

$$W_i = \frac{A_i}{A}, \quad \hat{p}_{ij} = \frac{n_{ij}}{n_i}, \quad \hat{A}_j = A \sum_i W_i \hat{p}_{ij}$$

Use the sampling design and domain required by M01.4. W_i is the mapped stratum weight, not an estimated weight by default; n_{ij} and n_i are reference counts. This upstream estimator is not fitted by the account workbook.

Basis: M01.4; M01.5; T-03.

Workbook: Evidence!G; Spatial!!; qualified upstream calculation.

Stratum / plot / observation set i, j, n_i	Design, variables and quality controls $W_i, \hat{p}_{ij}$	Evidence, coverage and limitations $\hat{A}_j$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Model and implementation passport

FEASIBILITY-T08 / Calculation notation

$$x_\ell [u_\ell]$$

x_ℓ is the identified observation, input, or output; u_ℓ is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Component / equation IDs x_ℓ	Version, parameters and provenance u_ℓ, t	Calibration / independent test source(x_ℓ)
CCA and physical-gradient calibration	[Complete]	[Complete]
Membership, rules, inference and MOM	[Complete]	[Complete]
Classification and temporal transitions	[Complete]	[Complete]

Independent performance and transfer decision

Report validation design, reference provenance, errors and uncertainty, failed tests and supported domain. Membership is not probability or area. Distinguish shrub vegetation from demonstrated degradation and class changes from physical losses.

[Enter response and evidence references.]

05 NEB002 material reference and evidence pathway

[1] Basis: T-04; T-05; T-06; T-07; T-11; T-12; T-13; T-15; FRM-08

Pathway by stratum

FEASIBILITY-T09 / Calculation notation

$$x_{\ell} [u_{\ell}]$$

x_{ℓ} is the identified observation, input, or output; u_{ℓ} is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Stratum / selected route A, B or C x_{ℓ}	Retained or new reference evidence u_{ℓ}, t	Applicability and independent checks source(x_{ℓ})
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Material-to-carbon and calibration record

FEASIBILITY-T10 / Calculation notation

$$C_j = 10^{-3} \sum_o V_{jo} \rho_{jo}^b f_{jo}^C$$

$$c_p = \frac{\sum_{j \in p} C_j + C_{p, \text{other}}}{a_p}$$

V is green material volume in m³; ρ_b is oven-dry kg per green m³; f_C is dry-mass carbon fraction. C_j is Mg C; c_p is Mg C/ha. The plot denominator a_p is in ha. Pools must be disjoint and moisture conventions matched.

Basis: M02.1; M02.2; F-M01.

Workbook: Evidence!G; Factors!D:G; upstream organ and plot records.

Input / compartment / equation j, o, p	Units, convention and evidence $V_{jo}, \rho_{jo}^b, f_{jo}^C$	Calibration, uncertainty and test C_j, c_p
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Reference qualification and completeness

For new material evidence, document volume, disjoint organs, dry/green density conventions, tissue fractions and quality controls. For libraries, provide actual model records and transfer tests. For secondary products, establish support and a complete-account conservative treatment.

[Enter response and evidence references.]

No universal architectural uplift or automatic conventional-estimator ceiling is assumed. A finer map does not independently validate its inherited carbon labels.

06 Baseline, interventions and continuing additionality

[1] Basis: S-08; S-09; AO-05; AO-06; AO-07; AO-08; AO-10; FRM-01/AO

Baseline alternatives and selection

Alternative / driver / spatial support	Credibility, status and evidence	Selection / rejection and sensitivity
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Intervention-level additionality

Intervention / implementing party	Driver, barrier and causal mechanism	Test, counterfactual and evidence
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Continuing assessment and prior interventions

Reference legal duties, common practice and relevant financing tests. Address existing activities affecting the counterfactual, timing of evidence, governance indicators, review triggers and controlled reassessment without opportunistic baseline resets.

[Enter response and evidence references.]

07 Quantification, parameters and uncertainty

[1] Basis: F-01; F-02; T-08; T-09; T-14; T-16; FRM-05; FRM-08

Complete calculation chain

FEASIBILITY-T13 / Calculation notation

$$q_{\ell,s,t} = x_{\ell,s,t} f_{\ell,s,t}$$

$$N_{s,t} = \sum_{\ell \in \mathcal{I}_{s,t}} q_{\ell,s,t}$$

x and f have reciprocal units yielding t CO2e per period. I is the set of included, evidenced, disjoint components for the same basis, period and account. For precomputed mass, f=1 must be explicitly entered with its meaning. BL and PJ are net emissions; LK is attributable leakage.

Basis: M04.4; M04.5; T-08; arithmetic implementation.

Workbook: Components!G:I; ExAnte!F:H; ExPost!F:H.

Output / equation IDs ℓ, s, t	Inputs, support, units and source $x_{\ell,s,t}, f_{\ell,s,t}$	Result, status and evidence $q_{\ell,s,t}, N_{s,t}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Uncertainty and sensitivity budget

FEASIBILITY-T14 / Calculation notation

$$u_Q^2 = u_B^2 + u_P^2 + u_L^2 - 2 \text{Cov}(B, P) - 2 \text{Cov}(B, L) + 2 \text{Cov}(P, L)$$

B, P and L in this variance identity denote baseline, project and leakage estimators, not reserve B_t. Standard uncertainties are in t CO2e; variances and covariances are squared units. Retain shared-source dependence and a valid covariance matrix.

Basis: F-U01; M05.1; M05.2.

Workbook: Qualified uncertainty calculation; ExAnte!J:L; ExPost!J:L.

Component / possible bias B, P, L	Quantification, covariance or bound $u_B, u_P, u_L, \text{Cov}$	Effect and acceptance evidence u_Q^2, Q_t^{low}
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Reconciliation and parameter decisions

Attach the complete reproducible calculation and FRM-05 AP-01–AP-12 profile. Separate observations, calibration, assumptions and projections. State the materiality basis and conservative direction for the full net account. Retain negative results and failed tests.

[Enter response and evidence references.]

08 Leakage, risk, liabilities and reserve design

[1] Basis: S-10; S-11; T-17; T-18; T-19; T-20; F-03; FRM-09; FRM-02/C

Leakage and residual-risk dossier

FEASIBILITY-T15 / Calculation notation

$$\widehat{L}_t = N_{\text{PLKA,with},t} - N_{\text{PLKA,without},t}$$

The two accounts have matched geography, activities, gases and intervals. Any source ratio remains an explicit numerator/denominator, not an assumed percentage. A signed diagnostic does not automatically authorize an extra benefit; the applicable attribution profile governs.

Basis: F-L01; T-08.

Workbook: Components!D=LK; ExAnte!H; ExPost!H.

Source / exposure / horizon t , PLKA	Evidence, model or stress treatment $N_{\text{PLKA,with},t}$, $N_{\text{PLKA,without},t}$	Control, responsibility and residual loss $\widehat{L}_t$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Liability and reserve profile

FEASIBILITY-T16 / Calculation notation

$$Q_t^{\text{eligible}} = \max(0, Q_t^{\text{low}}), \quad D_t^{\text{cand}} = \min(D_t, Q_t^{\text{eligible}})$$

$$Q_t^{\text{base,cand}} = Q_t^{\text{eligible}} - D_t^{\text{cand}}, \quad J_t^{\text{cand}} = Q_t^{\text{base,cand}} - B_t$$

cand distinguishes a worksheet proposal from an executed posting. D_set is actual evidenced settlement; D_rem = D - D_set. Do not reduce posted liability by D_cand. A larger required reserve than the candidate base is a shortfall, not funded protection. No rounding is implied.

Basis: M05.4; M05.5; F-R03.

Workbook: Settlement!B:L; ExAnte!M:O (forecast only).

Item D_t , Q_t^{low}	Rule and evidence D_t^{cand} , D_t^{set}	Authorization / unresolved decision $Q_t^{\text{base,cand}}$, B_t , J_t^{cand}
Prior compatible liabilities	[Complete]	[Complete]
Post-liability reserve base / F-R03	[Complete]	[Complete]
Negative-result treatment / F-R05a/b	[Complete]	[Complete]
Protection, remedy and replenishment	[Complete]	[Complete]

Distinguish uncertainty conservativeness from a physical reversal, and required protection from newly funded reserve. Candidate settlement is not executed settlement. Record the applicable AP-09 decision; no reserve percentage is set here.

09 Safeguards, consent, benefits and overlapping claims

[1] Basis: S-12; S-13; S-17; AO-03; AO-04; AO-09; AO-10; AO-12; FRM-04/AO

Participation, consent and safeguard evidence

Affected party / issue	Evidence, method and independent check	Agreement, grievance and action
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Overlap disposition

Area, period and outcome intersection	Authority and earlier interventions	Resolution / bounded hold / evidence
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Benefits, adverse impacts and monitoring commitments

Document agreed benefit-sharing, adverse-impact prevention, accessible complaint arrangements and independent assessment access. Distinguish observed outcomes from intended benefits; do not equate different attributes.

[Enter response and evidence references.]

10 Implementation, monitoring and operational feasibility

[1] Basis: S-25; P-02; P-03; P-04; CYC-04; CYC-06

Implementation and resources

FEASIBILITY-T19 / Calculation notation

$$c_{j,t} [u_c]$$

c is the recorded cost or resource amount in the explicitly identified currency and price date. Enter the actual budgeting equation and its data source if calculated. This label supplies no price, discount rate, financial formula, or emission factor.

Basis: CYC-03; CYC-04; CYC-05; data label.

Workbook: Project budget attachment; Evidence!G.

Activity / milestone j, t	Implementer / resource commitment $c_{j,t}$	Schedule / constraint / evidence source($c_{j,t}$)
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Monitoring variable register

FEASIBILITY-T20 / Calculation notation

$$x_\ell [u_\ell]$$

x_ℓ is the identified observation, input, or output; u_ℓ is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Variable / equation / support x_ℓ	Method, frequency and responsible party u_ℓ, t	Calibration, quality control and gaps source(x_ℓ)
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Demonstrated feasibility and contingency

Assess technical, environmental, social, legal, operational and resource feasibility separately. Record safety, access, seasonal limits, backup arrangements, event response and the financial assumptions supporting implementation.

[Enter response and evidence references.]

11 Project Description handover and remaining conditions

[1] Basis: CYC-04; CYC-05; S-16; S-18; MIG-01; MIG-07; U-01

Feasibility conclusions by dimension

Dimension	Conclusion and supporting evidence	Constraint / responsible party / action
Technical / environmental	[Complete]	[Complete]
Social / safeguards	[Complete]	[Complete]
Legal / rights	[Complete]	[Complete]
Operational / resources	[Complete]	[Complete]

PD transfer package

Record / output	Version and custodian	Outstanding condition / gate affected
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Requested supported scope

Identify the activities, strata and attributes supported for PD preparation. Record historical-data or migration decisions separately and preserve liabilities. Do not represent feasibility as independent outcome verification.

[Enter response and evidence references.]

12 Evidence, annexes and references

[1] Basis: F-01; S-17; P-04; A-05

Give every annex an identifier, version, date, custodian and exact location. Cite the source of every material input. Keep restricted supporting evidence separately accessible to authorized reviewers; do not hide the methodological basis of a claim.

Annex register

Annex / evidence ID	Contents and linked section	Custodian / access / version
[Complete]	[Complete]	[Complete]

[Complete]	[Complete]	[Complete]

Reproducibility and transfer

Identify the approved evidence package, calculation files, access arrangements and responsible custodian. Resolve all broken references before submission.

[Enter response and evidence references.]

13 Submission, review and stage decision

[1] Basis: CYC-01; CYC-04; S-16; S-22; S-23; FRM-03; FRM-06; A-12; A-13

Feasibility establishes the supported design scope for preparing the Project Description. It does not constitute independent design validation, registration or issuance.

Stage-exit review

Criterion	Evidence / section	Review finding
Rights, mandates and access substantiated	[Complete]	[Not assessed]
Methods, calibration and independent checks documented	[Complete]	[Not assessed]
Calculation, sensitivity, uncertainty and risk reconciled	[Complete]	[Not assessed]
Safeguards and implementation resources established	[Complete]	[Not assessed]
Monitoring protocol and PD handover complete	[Complete]	[Not assessed]

Separate records and signatures

Action / accountable role	Name, date and signature	Decision / scope / record
Submission / proponent	[Complete]	[Complete]
Technical preparation	[Complete]	[Complete]
Unconflicted review	[Complete]	[Complete]
Authorized stage decision	[Complete]	[Advance / correct / defer / decline]

Conditions, unresolved findings and next-stage handover

State the permitted scope, blocked activities or claims, corrective-action owner, evidence required, deadline under the approved profile and receiving party. A blank signature is not approval.

[Enter response and evidence references.]

A Ex-ante, ex-post and migration account attachments

[1] Basis: CYC-01; CYC-05; F-01; F-03; P-13; MIG-05; FRM-02; FRM-04; FRM-05

Stage-specific use

Finalize the supported ex-ante account and its evidence route. For an existing or migrated project, attach the applicable ex-post and migration reconciliations with their distinct status.

[Enter response and exact evidence references.]

Account attachment register

FEASIBILITY-T27 / Calculation notation

$x_\ell [u_\ell]$

x_ℓ is the identified observation, input, or output; u_ℓ is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Product / applicable scope x_ℓ	Version, workbook and evidence location u_ℓ, t	Status / reviewer / unresolved restriction $\text{source}(x_\ell)$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Common account contract

Use the bilingual Ex-Ante Estimate, Ex-Post Outcome Report and Migration Reconciliation formats with the calculation workbook as applicable. Identify periods, bands, units, missing data and exact source cells. Keep forecasts, monitored inputs, the counterfactual, verified results and authorized NVEUs distinct. No template rate or blank field establishes policy, zero emissions or issuance.

[Enter response and exact evidence references.]

Required reconciliation

FEASIBILITY-T28 / Calculation notation

$$\Delta q_{\text{basis}} = q^{\text{harm}} - q^{\text{src}}, \quad \Delta q_{\text{method}} = q^{\text{NEB}} - q^{\text{harm}}$$

$$q^{\text{NEB}} - q^{\text{src}} = \Delta q_{\text{basis}} + \Delta q_{\text{method}}$$

src retains the original result; harm is the original method on the agreed comparable basis; NEB is the receiving-method result on that basis. This telescoping identity explains differences, not eligibility. Do not force the methodological difference to zero.

Basis: MIG-05; P-13; reconciliation identity.

Workbook: Migration!E:K.

Dimension / original record <i>t, u</i>	Receiving or monitored treatment <i>q^{src}, q^{harm}, q^{NEB}</i>	Evidence and decision reference <i>Δq_{basis}, Δq_{method}</i>
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

CALC Calculation traceability and notation

[1] Basis: F-01; T-01; P-13; FRM-02; FRM-04; NEB-MTH-002

Record each calculated quantity as a uniquely identified row. Retain the exact source expression and a separate expression for any NEBIOT adaptation. A translated label does not change a formula. Units, included pools, sign convention, observation period, input status, and mathematical domain are part of the calculation record. An administrative table does not need an invented equation. Source-defined variables that remain ambiguous require clarification rather than an assumed meaning.

Indices and status

EA / EP: dated forecast / reporting-period account; t : interval; i, j : declared strata or classes; o : disjoint organ or pool; g : gas; τ : disturbance cohort; ℓ : calculation/component row.

One calculation record – repeat for each result

Field	Record
Calculation row / symbol	[Complete]
Definition and intended use	[Complete]
Exact source file / version / fingerprint	[Complete]
Worksheet / cell or raw record ID	[Complete]
Original expression and original unit	[Complete]
Inputs: symbols, values, units and periods	[Complete]
Receiving equation / standard identifier	[Complete]
Transformation, conversion and rationale	[Complete]
Unrounded intermediate and final values	[Complete]
Report table / row / output location	[Complete]
Recalculation difference / tolerance basis	[Complete]
Independent reviewer / finding / disposition	[Complete]

Arithmetic comparison, not materiality

$$\delta_{\ell} = v_{\ell}^{\text{recalc}} - v_{\ell}^{\text{reference}}$$

$$|\delta_{\ell}| \leq \varepsilon_a + \varepsilon_r |v_{\ell}^{\text{reference}}|$$

The absolute tolerance has the result unit; the relative tolerance is dimensionless. Record both explicitly. They are software-comparison settings, not approved materiality thresholds. Compare unrounded values. First reproduce the source method; then show each accepted change separately. Do not force an adapted methodological result to equal the source.
