Implementing organizations and stakeholders

IMPLEMENTING ENTITY

[Insert authorized logo]

[Organization / role]

PROJECT PROPONENT

[Insert authorized logo]

[Organization / role]

RIGHTS HOLDERS / STAKEHOLDERS

[Insert authorized logo]

[Organization / role]

Use authorized logos and identify each organization's actual role. Logo display does not establish consent, project ownership, endorsement, validation or admission. Remove unused partner spaces from the completed submission.

The English logo wording is a translation, not a separate legal entity.

License and use of this template

This document is issued by Nuevo Estándar Biotropical—NEBIOT S.A.S. Henry Arellano-Peña is the methodological author of NEB001 and NEB002. Rights in NEBIOT’s protected materials remain with their respective rights holders. Commercial use, reproduction, adaptation, redistribution, and sublicensing of protected material are subject to the applicable license or specific written permission from the authorized rights holder; permissions for use within the NEBIOT program shall be recorded in FRM-07 under S-21. Access to this document does not itself grant a commercial license, transfer ownership, authorize sublicensing, confer program admission, or authorize certification or issuance of environmental units. Supporting publications and third-party data, software, and images retain their respective licenses and attribution requirements; existing lawful permissions and uses permitted by applicable law remain unaffected. Authorized independent reviewers shall receive the access necessary for inspection, recalculation, and reporting under S-22, subject to the applicable permissions and confidentiality safeguards.

Completion instructions

This template organizes the evidence required for its project stage under NEBIOT Standard version 0.8.2. It does not replace the standard, its applicable methods, the approved case profile or the controlled forms. Complete the bracketed fields and expand tables or narrative areas as needed. For an inapplicable item, record a reason and the reviewer’s disposition; do not silently delete it. Identify unknown information as missing, not zero. Keep observations, assumptions, projections, verified outcomes and authorized NVEUs distinct. Requirements are assessed at the stage to which they apply; later-stage fields do not imply earlier completion.

Reference and scope

[1] NEBIOT. NEBIOT Standard, controlled version 0.8.2. NEB-DOC-000, integrated edition. Principal dependencies: NEB-CYC-001; NEB-STD-001 and Annex A; NEB-MTH-001/002; NEB-UNT-001; NEB-PRO-001; NEB-MIG-001; NEB-AUD-001; and NEB-FRM-001. All clause, equation, AP and FRM references in this template refer to that version. They are external normative dependencies, not missing sections of this template. NIP retains the source name Nota de Idea de proyecto; “Project Idea Note” is an explanatory English rendering. PD means Project Description. NEBIOT provides the contracted technical assessment, design and monitoring services. The named proponent and implementing entity retain project execution responsibilities under S-25; exceptional NEBIOT interests follow S-26.

01 Origin, mandate and migration route

[1] Basis: MIG-01; MIG-02; MIG-03; S-21; S-25; FRM-04; FRM-07

Original record identity

Program / project / methodology version	Original document, workbook and date	Authority, right of use and status
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Requested change

Distinguish project transfer, methodology change, historical-data reuse, reassessment of an unissued outcome and treatment of already issued other external carbon units. Identify exact responsibility, rights, original restrictions and the requested NEBIOT decision.

[Enter response and exact evidence references.]

Dates and scope

Original start / reporting history	Transition date and historical eligibility	Future monitoring scope / unresolved restriction
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

02 Spatial, temporal and measurand crosswalk

[1] Basis: MIG-03; MIG-04; MIG-13; MIG-14; P-13; AO-09

Compatibility matrix

MIGRATION-RECONCILIATION-T05 / Calculation notation

$$x_{\ell} [u_{\ell}]$$

x_{ℓ} is the identified observation, input, or output; u_{ℓ} is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Dimension / original definition x_{ℓ}	Receiving definition / difference u_{ℓ}, t	Evidence / correction / accepted scope source(x_{ℓ})
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Minimum matching dimensions

Reconcile project and leakage boundaries, strata, forest/event definitions, observation dates, accounting periods, gas/GWP convention, pools, units, precision and source status. A label such as net emissions may describe different included deductions; identify the actual arithmetic before comparing totals.

[Enter response and exact evidence references.]

Qualified reuse decision

MIGRATION-RECONCILIATION-T06 / Calculation notation

$$x_{\ell} [u_{\ell}]$$

x_{ℓ} is the identified observation, input, or output; u_{ℓ} is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Input / pathway A, B or C x_{ℓ}	Retain, supplement, replace or exclude u_{ℓ}, t	Evidence, reviewer and use limitation source(x_{ℓ})
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

03 Method and formula correspondence

[1] Basis: MIG-03; MIG-05; T-01; F-01; F-P01; F-P02

Calculation lineage

MIGRATION-RECONCILIATION-T07 / Calculation notation

$$q_{\ell,s,t} = x_{\ell,s,t} f_{\ell,s,t}$$
$$N_{s,t} = \sum_{\ell \in \mathcal{I}_{s,t}} q_{\ell,s,t}$$

x and f have reciprocal units yielding t CO2e per period. I is the set of included, evidenced, disjoint components for the same basis, period and account. For precomputed mass, f=1 must be explicitly entered with its meaning. BL and PJ are net emissions; LK is attributable leakage.
Basis: M04.4; M04.5; T-08; arithmetic implementation.
Workbook: Components!G:I; ExAnte!F:H; ExPost!F:H.

Original sheet / cells / equation ℓ, s, t	Meaning, unit, status and dependencies $x_{\ell,s,t}, f_{\ell,s,t}$	NEBIOT equation / treatment / justification $q_{\ell,s,t}, N_{s,t}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Assumptions and unresolved meanings

Separate original hardcoded quantities, imported model outputs, formulas, copied values and manual exclusions. Do not silently adopt source-specific effectiveness factors, leakage adjustments, reserves or review intervals. An inherited allometric comparator is not an organ-measurement implementation.

[Enter response and exact evidence references.]

04 Original, harmonized and receiving quantities

[1] Basis: MIG-05; P-13; F-R01; F-R03; S-18

Matched reconciliation

MIGRATION-RECONCILIATION-T08 / Calculation notation

$$\Delta q_{\text{basis}} = q^{\text{harm}} - q^{\text{src}}, \quad \Delta q_{\text{method}} = q^{\text{NEB}} - q^{\text{harm}}$$

$$q^{\text{NEB}} - q^{\text{src}} = \Delta q_{\text{basis}} + \Delta q_{\text{method}}$$

src retains the original result; harm is the original method on the agreed comparable basis; NEB is the receiving-method result on that basis. This telescoping identity explains differences, not eligibility. Do not force the methodological difference to zero.

Basis: MIG-05; P-13; reconciliation identity.

Workbook: Migration!E:K.

Period / quantity / unit <i>t, u</i>	Original / harmonized original / NEBIOT $q^{\text{src}}, q^{\text{harm}}, q^{\text{NEB}}$	Difference by basis and method / evidence $\Delta q_{\text{basis}}, \Delta q_{\text{method}}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Explain all bridges

Keep the original record unchanged. Identify each adjustment for spatial or temporal support, units, activity data, factors, uncertainty, liabilities and reserve. A bridge closes arithmetically only when the component differences sum to the total; its empirical and approval basis remains a separate assessment.

[Enter response and exact evidence references.]

Unreconciled difference

MIGRATION-RECONCILIATION-T09 / Calculation notation

$$\Delta Q_t = Q_t^{\text{EP}} - Q_t^{\text{EA}}$$

$$\Delta Q_t = \Delta N_{\text{BL},t} - \Delta N_{\text{PJ},t} - \Delta L_t$$

All deltas are EP minus the frozen EA value on the same support before uncertainty and reserve. $r = \Delta Q - (\Delta \text{BL} - \Delta \text{PJ} - \Delta \text{L})$ is an arithmetic residual. A forecast difference is not itself mitigation, causation, or a materiality finding.

Basis: M04.5; P-13; comparison identity.

Workbook: Comparison!D:J.

Issue / impact / affected interval <i>t, z</i>	Required evidence or recalculation $Q_t^{\text{EA}}, Q_t^{\text{EP}}$	Responsible party / decision consequence $\Delta Q_t, r_t$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

05 Historical claim status and continuing obligations

[1] Basis: MIG-06; MIG-07; MIG-08; U-04; U-05; F-R05a; F-R05b

Original outcome status

MIGRATION-RECONCILIATION-T10 / Calculation notation

$$\Delta q_{\text{basis}} = q^{\text{harm}} - q^{\text{src}}, \quad \Delta q_{\text{method}} = q^{\text{NEB}} - q^{\text{harm}}$$

$$q^{\text{NEB}} - q^{\text{src}} = \Delta q_{\text{basis}} + \Delta q_{\text{method}}$$

src retains the original result; harm is the original method on the agreed comparable basis; NEB is the receiving-method result on that basis. This telescoping identity explains differences, not eligibility. Do not force the methodological difference to zero.

Basis: MIG-05; P-13; reconciliation identity.

Workbook: Migration!E:K.

Outcome / period / serial or reference <i>t, u</i>	Issued / used / retired / canceled / unsued $q^{\text{src}}, q^{\text{harm}}, q^{\text{NEB}}$	Compatible quantity and authoritative evidence $\Delta q_{\text{basis}}, \Delta q_{\text{method}}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Continuing balance

MIGRATION-RECONCILIATION-T11 / Calculation notation

$$N_t^- = \max(0, -Q_t^{\text{low}}), \quad \Delta D_t^- = N_t^- - O_t - C_t^-$$

$$D_{t+1} = D_t^{\text{rem}} + \Delta D_t^-$$

FULL_BOUND only when expressly adopted. O is a documented previously recognized portion of the same deficit; C_minus is executed reserve cancellation for a disjoint portion. Require O+C_minus <= N_minus. A negative uncertainty bound is not automatically a physical reversal.

Basis: F-R05a; F-R05b; F-03.

Workbook: CarryForward!B:J; Settlement!L.

Liability, reserve or delayed release Q_t^{low}, N_t^-	Opening amount, custody and commitment O_t, C_t^-	Receiving treatment / obligor / closing record $\Delta D_t^-, D_{t+1}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

No automatic replacement

Do not add original and receiving quantities as new benefits. Cancellation alone is not replacement authority. No denominator, boundary change or administrative rename may reactivate a used outcome, erase a deficit, reset the original project start or free reserve committed elsewhere.

[Enter response and exact evidence references.]

06 Forecast, monitored and verified records

[1] Basis: P-01; P-13; P-14; MIG-04; MIG-09; U-01

Status-separated comparison

MIGRATION-RECONCILIATION-T12 / Calculation notation

$$\Delta Q_t = Q_t^{\text{EP}} - Q_t^{\text{EA}}$$

$$\Delta Q_t = \Delta N_{\text{BL},t} - \Delta N_{\text{PJ},t} - \Delta L_t$$

All deltas are EP minus the frozen EA value on the same support before uncertainty and reserve. $r = \text{deltaQ} - (\text{deltaBL} - \text{deltaPJ} - \text{deltaL})$ is an arithmetic residual. A forecast difference is not itself mitigation, causation, or a materiality finding.

Basis: M04.5; P-13; comparison identity.

Workbook: Comparison!D:J.

Original ex-ante version and vintage t, z	Ex-post record and observation support $Q_t^{\text{EA}}, Q_t^{\text{EP}}$	OVV opinion scope / receiving decision $\Delta Q_t, r_t$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Historical versus future periods

Specify whether each period is original, reconstructed, restated, reported, verified or authorized. Preserve an original forecast before creating a matched restatement. Separate historical unissued outcomes from future projections and from previous issuances.

[Enter response and exact evidence references.]

07 Additionality, overlap and safeguard continuity

[1] Basis: AO-01; AO-05; AO-08; AO-10; AO-11; AO-12; MIG-06

Existing interventions and rights

Retain relevant earlier activities, authority, participation and safeguard evidence. A new applicant cannot assume that an area with existing interventions is untreated. Distinguish polygon overlap from an actual claim intersection and document any shared outcome without multiplying it.

[Enter response and exact evidence references.]

Continuity and disputed scope

Right / intervention / complaint	Evidence and earlier disposition	Current conclusion / remedy / retained restriction
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

08 Receiving decision and monitoring handover

[1] Basis: MIG-09; MIG-10; MIG-11; MIG-16; MIG-17; P-09; FRM-06

Requirement and disposition

NEBIOT requirement / source evidence	Accepted, conditional or not accepted scope	Correction / owner / independent decision
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Transition and subsequent reporting

Record applicable versions, cutover, retained restrictions, data custody, accepting parties, next monitoring actions and liabilities. Retain the original archive separately. State what the decision permits and what remains blocked; no new NVEU follows from the reconciliation alone.

[Enter response and exact evidence references.]

Signatures and authority

Role / organization	Name, date and signature	Mandate / decision / evidence reference
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

CALC Calculation traceability and notation

[1] Basis: F-01; T-01; P-13; FRM-02; FRM-04; NEB-MTH-002

Record each calculated quantity as a uniquely identified row. Retain the exact source expression and a separate expression for any NEBIOT adaptation. A translated label does not change a formula. Units, included pools, sign convention, observation period, input status, and mathematical domain are part of the calculation record. An administrative table does not need an invented equation. Source-defined variables that remain ambiguous require clarification rather than an assumed meaning.

Indices and status

EA / EP: dated forecast / reporting-period account; t : interval; i, j : declared strata or classes; o : disjoint organ or pool; g : gas; τ : disturbance cohort; ℓ : calculation/component row.

One calculation record – repeat for each result

Field	Record
Calculation row / symbol	[Complete]
Definition and intended use	[Complete]
Exact source file / version / fingerprint	[Complete]
Worksheet / cell or raw record ID	[Complete]
Original expression and original unit	[Complete]
Inputs: symbols, values, units and periods	[Complete]
Receiving equation / standard identifier	[Complete]
Transformation, conversion and rationale	[Complete]
Unrounded intermediate and final values	[Complete]
Report table / row / output location	[Complete]
Recalculation difference / tolerance basis	[Complete]
Independent reviewer / finding / disposition	[Complete]

Arithmetic comparison, not materiality

$$\delta_{\ell} = v_{\ell}^{\text{recalc}} - v_{\ell}^{\text{reference}}$$

$$|\delta_{\ell}| \leq \varepsilon_a + \varepsilon_r |v_{\ell}^{\text{reference}}|$$

The absolute tolerance has the result unit; the relative tolerance is dimensionless. Record both explicitly. They are software-comparison settings, not approved materiality thresholds. Compare unrounded values. First reproduce the source method; then show each accepted change separately. Do not force an adapted methodological result to equal the source.
