

Program authority: Nuevo Estándar Biotropical – NEBIOT S.A.S.

Project Description

PD • *Design-validation dossier*

Governing standard: NEBIOT 0.8.2 | Template edition 1.2

[PROJECT NAME]

Project ID: [ID]

Country / jurisdiction: [Country / jurisdiction]

Project document version: [Version]

Issue date: [YYYY-MM-DD]

Implementing organizations and stakeholders

IMPLEMENTING ENTITY

[Insert authorized logo]

[Organization / role]

PROJECT PROPONENT

[Insert authorized logo]

[Organization / role]

RIGHTS HOLDERS / STAKEHOLDERS

[Insert authorized logo]

[Organization / role]

Use authorized logos and identify each organization's actual role. Logo display does not establish consent, project ownership, endorsement, validation or admission. Remove unused partner spaces from the completed submission.

The English logo wording is a translation, not a separate legal entity.

License and use of this template

This document is issued by Nuevo Estándar Biotropical—NEBIOT S.A.S. Henry Arellano-Peña is the methodological author of NEB001 and NEB002. Rights in NEBIOT’s protected materials remain with their respective rights holders. Commercial use, reproduction, adaptation, redistribution, and sublicensing of protected material are subject to the applicable license or specific written permission from the authorized rights holder; permissions for use within the NEBIOT program shall be recorded in FRM-07 under S-21. Access to this document does not itself grant a commercial license, transfer ownership, authorize sublicensing, confer program admission, or authorize certification or issuance of environmental units. Supporting publications and third-party data, software, and images retain their respective licenses and attribution requirements; existing lawful permissions and uses permitted by applicable law remain unaffected. Authorized independent reviewers shall receive the access necessary for inspection, recalculation, and reporting under S-22, subject to the applicable permissions and confidentiality safeguards.

Completion instructions

This template organizes the evidence required for its project stage under NEBIOT Standard version 0.8.2. It does not replace the standard, its applicable methods, the approved case profile or the controlled forms. Complete the bracketed fields and expand tables or narrative areas as needed. For an inapplicable item, record a reason and the reviewer’s disposition; do not silently delete it. Identify unknown information as missing, not zero. Keep observations, assumptions, projections, verified outcomes and authorized NVEUs distinct. Requirements are assessed at the stage to which they apply; later-stage fields do not imply earlier completion.

Reference and scope

[1] NEBIOT. NEBIOT Standard, controlled version 0.8.2. NEB-DOC-000, integrated edition. Principal dependencies: NEB-CYC-001; NEB-STD-001 and Annex A; NEB-MTH-001/002; NEB-UNT-001; NEB-PRO-001; NEB-MIG-001; NEB-AUD-001; and NEB-FRM-001. All clause, equation, AP and FRM references in this template refer to that version. They are external normative dependencies, not missing sections of this template. NIP retains the source name Nota de Idea de proyecto; “Project Idea Note” is an explanatory English rendering. PD means Project Description. NEBIOT provides the contracted technical assessment, design and monitoring services. The named proponent and implementing entity retain project execution responsibilities under S-25; exceptional NEBIOT interests follow S-26.

01 Project identity, chronology and authorized scope

[1] Basis: CYC-05; S-01; S-03; S-07; S-18; FRM-01

Executive description and environmental objectives

Identify the project, ecosystems, activities, intended outcomes and location. State the scope submitted for design validation and distinguish projections from observed or previously verified information.

[Enter response and evidence references.]

Project chronology

Event / activity / accounting interval	Date or period and evidence	Status / applicable approval
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Applicable versions and prior-stage handover

Document / method / decision	Version / effective scope	Evidence and change since feasibility
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

02 Roles, rights and authority to implement and claim

[1] Basis: S-04; S-05; S-21; S-22; S-25; S-26; AO-02; FRM-07

Responsibility and authorization register

Role	Entity / named lead	Mandate, scope and evidence
Project proponent	[Complete]	[Complete]
Rights holders	[Complete]	[Complete]
Implementing entity	[Complete]	[Complete]
NEBIOT technical lead	[Complete]	[Complete]

Distinct rights and permissions

Right / permission / obligation	Holder, mandate and period	Evidence, restriction or dispute
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Conflict and service-control arrangements

Identify independent OVV arrangements, internal preparation and decision separation, applicable program review and any S-26 exceptional participation. Record responsible parties for implementation, correction, incidents and remedy.

[Enter response and evidence references.]

03 Territory, boundaries and spatial support

[1] Basis: S-03; S-06; T-03; AO-09; MIG-13; MIG-14; FRM-04/M

Project map / spatial evidence

Insert a readable project map. Identify boundary version, coordinate reference system, scale, observation date, data source, legend and restrictions on disclosure. A screening map does not establish rights or an outcome boundary.

[INSERT PROJECT MAP]

Boundaries and accounting domains

PD-T07 / Calculation notation

$$A_{i,t} = \frac{n_{i,t} a_{\text{cell}}}{k_A}, \quad k_A = 10^4 \text{ m}^2 \text{ ha}^{-1}$$

n is a pixel count; a_cell is pixel area in m2; A is area in ha. The PIXELS route uses the displayed geometric conversion. Direct area is a documented input. Net class change is not gross deforestation.

Basis: M01; MIG-13; MIG-14.

Workbook: Spatial!F:I; Profile!B15.

Domain / stratum / eligible mask <i>i, t</i>	Area, unit, version and date <i>A_{i,t}, n_{i,t}, a_{cell}</i>	Relationship, exclusions and evidence mask, scope
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Spatial-input passport and change history

Attach exact products, bands, units, spatial and temporal support, measurement dates, forest/event definitions, processing steps, data-use rights and independent applicability tests. Explain boundary changes and reconcile overlap.

[Enter response and evidence references.]

04 Interventions, objectives and causal design

[1] Basis: CYC-05; S-08; S-25; AO-05; AO-06; AO-07; FRM-01/AO

Intervention register

Activity / location / implementer	Driver or barrier addressed	Mechanism, expected change and evidence
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Theory of change and evidence boundaries

Explain the causal pathway from activities to intermediate responses and environmental outcomes. Include governance or livelihood mechanisms where supported and distinguish assumptions, alternative explanations and effects outside the project.

[Enter response and evidence references.]

Performance and decision indicators

PD-T09 / Calculation notation

$$\Delta x_{r,t}^{\text{add}} = (x_{r,\text{PJ},t_1} - x_{r,\text{PJ},t_0}) - (x_{r,\text{BL},t_1} - x_{r,\text{BL},t_0})$$

r identifies one environmental or social indicator with its own unit u_r . This is the candidate estimand in M06.1, not an approved conversion to carbon or NVEU. Report different attributes separately; specify the protocol and observation support.

Basis: M06.1; T-10.

Workbook: Separate indicator schedule; Evidence!G.

Indicator / attribute r, t_0, t_1	Evidence, unit and frequency $x_{r,s,t} [u_r]$	Responsible party / review trigger $\Delta x_{r,t}^{\text{add}}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

05 Methods, evidence routes and calibrated models

[1] Basis: S-01; S-02; T-01; T-04; T-06; T-07; T-11; T-12; T-13; T-15; FRM-08

Applicability and pathway register

PD-T10 / Calculation notation

$x_\ell [u_\ell]$

x_l is the identified observation, input, or output; u_l is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Module / stratum / route A, B or C <i>x_ℓ</i>	Inputs, domains and exclusions <i>u_ℓ, t</i>	Version, qualification and evidence <i>source(x_ℓ)</i>
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

NEB001 implementation and independent checks

Reference field and floristic evidence, CCA and gradient calibration, membership functions, inference, MOM, rules and parameters, temporal consistency, classification error and independent reference design.

[Enter response and evidence references.]

NEB002 reference, estimation and transfer

Reference disjoint organ measurements, material-volume and density conventions, tissue fractions, quality controls and plot aggregation; or the selected qualified library / secondary-evidence route. Document actual model records, holdouts, transfer limits and failed tests as applicable.

[Enter response and evidence references.]

06 Baseline, drivers and applicable reference relationships

[1] Basis: S-05; S-09; AO-05; MIG-03; MIG-05; FRM-05

Baseline scenario comparison

Alternative / driver / domain	Historical and current evidence	Credibility, selection and rejection
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Selected baseline and spatial / temporal allocation

State the selected pathway, reference domain, historical series, applicable periods and allocation method. Distinguish actual land use, preparation and anticipated conversion. Identify any required national reference, nesting or accounting relationship using its dated applicability record.

[Enter response and evidence references.]

Validity, sensitivity and controlled reassessment

Document sensitivities, transfer of evidence, changes in drivers, conditions for reassessment and reconciliation with prior versions. Changes cannot silently reset project age, baseline or obligations.

[Enter response and evidence references.]

07 Additionality and adaptive continuation

[1] Basis: S-08; AO-06; AO-07; AO-08; AO-10; AO-11; FRM-01/AO; FRM-02/AO

Applicable additionality tests

Test / intervention / relevant period	Evidence and counterfactual	Conclusion, limits and review trigger
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Legal duties, common practice and financing where applicable

Explain how each adopted test is met using dated evidence. Distinguish compliance with legal duties from evidence of additional effect. Address the actual role of prior and concurrent interventions rather than assuming untreated territory.

[Enter response and evidence references.]

Continuing additionality review plan

Indicator / changed condition	Evidence, frequency or event trigger	Reviewer, action and controlled record
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

08 Overlap, interacting initiatives and migration

[1] Basis: AO-01; AO-02; AO-04; AO-09; AO-10; AO-11; AO-12; MIG-02; MIG-06; MIG-07; MIG-12; MIG-17; FRM-04/AO; FRM-04/M

Outcome-level overlap assessment

Initiative / geography / period / attribute	Authority, interventions and claim history	Finding, allocation evidence or bounded hold
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Reconciliation and uniqueness

Separate geographic intersection, legitimate authority, additionality and outcome duplication. Identify shared causal effects; do not assign the entire common outcome to every initiative. Record the spatial and temporal support of the actual claim, not only its identifier.

[Enter response and evidence references.]

Migration and historical obligations, where applicable

PD-T15 / Calculation notation

$$\Delta q_{\text{basis}} = q^{\text{harm}} - q^{\text{src}}, \quad \Delta q_{\text{method}} = q^{\text{NEB}} - q^{\text{harm}}$$

$$q^{\text{NEB}} - q^{\text{src}} = \Delta q_{\text{basis}} + \Delta q_{\text{method}}$$

src retains the original result; harm is the original method on the agreed comparable basis; NEB is the receiving-method result on that basis. This telescoping identity explains differences, not eligibility. Do not force the methodological difference to zero.

Basis: MIG-05; P-13; reconciliation identity.

Workbook: Migration!E:K.

Origin / method / record t, u	Status, quantity and period $q^{\text{src}}, q^{\text{harm}}, q^{\text{NEB}}$	Transition and outstanding responsibility $\Delta q_{\text{basis}}, \Delta q_{\text{method}}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Preserve originating records, other external carbon units and their use history, reversals and reserve obligations. Qualified map reuse remains available. Cancellation alone does not authorize replacement issuance or create a new environmental benefit.

09 Quantification and reproducible environmental account

[1] Basis: F-01; T-05; T-08; T-09; CYC-05; FRM-02

Calculation chain and input provenance

PD-T16 / Calculation notation

$$q_{\ell,s,t} = x_{\ell,s,t} f_{\ell,s,t}$$

$$N_{s,t} = \sum_{\ell \in \mathcal{I}_{s,t}} q_{\ell,s,t}$$

x and f have reciprocal units yielding t CO₂e per period. I is the set of included, evidenced, disjoint components for the same basis, period and account. For precomputed mass, f=1 must be explicitly entered with its meaning. BL and PJ are net emissions; LK is attributable leakage.

Basis: M04.4; M04.5; T-08; arithmetic implementation.

Workbook: Components!G:I; ExAnte!F:H; ExPost!F:H.

Step / equation IDs / output ℓ, s, t	Input IDs, units, period and support $x_{\ell,s,t}, f_{\ell,s,t}$	Result, status and calculation location $q_{\ell,s,t}, N_{s,t}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Matched scenario and leakage accounts

PD-T17 / Calculation notation

$$\widehat{Q}_t^z = N_{\text{BL},t}^z - N_{\text{PJ},t}^z - L_t^z, \quad z \in \{\text{EA}, \text{EP}\}$$

EA denotes the dated forecast; EP denotes the reporting-period account, not automatic verification. All terms are signed period masses on matched support. The quantity is before uncertainty, previous liabilities, reserve, and denomination.

Basis: M04.5; F-R01.

Workbook: ExAnte!F:I; ExPost!F:I.

Account / gas / pool t, z	Quantity, unit and period $N_{\text{BL},t}^z, N_{\text{PJ},t}^z, L_t^z$	Inclusions, exclusions and overlap control $\widehat{Q}_t^z$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Account reconciliation

Attach the full calculation, pool and gas balance and scenario comparison. Distinguish stocks from changes and annual from cumulative quantities; carbon from CO₂ and CO₂e; modeled from observed values. Use the approved GWP convention and retain negative outcomes.

[Enter response and evidence references.]

10 Uncertainty, materiality, risk and liability treatment

[1] Basis: F-02; F-03; T-14; T-16; T-17; T-18; T-19; T-20; FRM-02/C; FRM-08; FRM-09

Uncertainty and materiality specification

PD-T18 / Calculation notation

$$u_Q^2 = u_B^2 + u_P^2 + u_L^2 - 2 \text{Cov}(B, P) - 2 \text{Cov}(B, L) + 2 \text{Cov}(P, L)$$

B, P and L in this variance identity denote baseline, project and leakage estimators, not reserve B_t. Standard uncertainties are in t CO2e; variances and covariances are squared units. Retain shared-source dependence and a valid covariance matrix.

Basis: F-U01; M05.1; M05.2.

Workbook: Qualified uncertainty calculation; ExAnte!J:L; ExPost!J:L.

Component / potential error <i>B, P, L</i>	Method, dependence and evidence <i>u_B, u_P, u_L, Cov</i>	Criterion, adjustment and decision <i>u_Q², Q_t^{low}</i>
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Liability and reserve design

PD-T19 / Calculation notation

$$Q_t^{\text{eligible}} = \max(0, Q_t^{\text{low}}), \quad D_t^{\text{cand}} = \min(D_t, Q_t^{\text{eligible}})$$

$$Q_t^{\text{base,cand}} = Q_t^{\text{eligible}} - D_t^{\text{cand}}, \quad J_t^{\text{cand}} = Q_t^{\text{base,cand}} - B_t$$

cand distinguishes a worksheet proposal from an executed posting. D_{set} is actual evidenced settlement; D_{rem} = D - D_{set}. Do not reduce posted liability by D_{cand}. A larger required reserve than the candidate base is a shortfall, not funded protection. No rounding is implied.

Basis: M05.4; M05.5; F-R03.

Workbook: Settlement!B:L; ExAnte!M:O (forecast only).

Account element <i>D_t, Q_t^{low}</i>	Applicable rule / evidence <i>D_t^{cand}, D_t^{set}</i>	Decision and unresolved condition <i>Q_t^{base,cand}, B_t, J_t^{cand}</i>
Conservative signed result / F-R03	[Complete]	[Complete]
Prior liability and executed settlement	[Complete]	[Complete]
Post-liability reserve base and protection	[Complete]	[Complete]
Negative carry-forward / F-R05a/b	[Complete]	[Complete]

Protection horizon, residual risk and remedy

Document the selected risk model or stress treatment, compatible available reserve, approved protection level where applicable, common shocks, shortfalls, cancellation, replenishment and remaining liability. An uncertainty-driven negative bound is not automatically a physical reversal.

[Enter response and evidence references.]

11 Participation, consent, safeguards and benefit-sharing

[1] Basis: S-12; S-13; S-17; AO-03; AO-12; P-12; A-13; A-14; A-15

Stakeholder and safeguards record

Party / issue / right	Consultation, consent and evidence	Commitment, independent check and remedy
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Benefit-sharing and adverse-impact controls

Describe decision participation, agreements, benefit allocation, vulnerable groups, adverse-impact prevention and monitoring. Separate executed arrangements from proposals and provide protected supporting evidence.

[Enter response and evidence references.]

Complaint access, deadlines and review

Record the published channel, approved timetable, non-digital and language access, protection against retaliation, independent handling of conflicts, escalation and record-retention approval. Do not substitute the project contact for a required independent route.

[Enter response and evidence references.]

12 Environmental attributes and NVEU claim boundaries

[1] Basis: S-02; T-10; T-22; U-01; U-02; U-03; U-05; U-07

Attribute and outcome register

PD-T21 / Calculation notation

$$\Delta x_{r,t}^{\text{add}} = (x_{r,\text{PJ},t_1} - x_{r,\text{PJ},t_0}) - (x_{r,\text{BL},t_1} - x_{r,\text{BL},t_0})$$

r identifies one environmental or social indicator with its own unit u_r . This is the candidate estimand in M06.1, not an approved conversion to carbon or NVEU. Report different attributes separately; specify the protocol and observation support.

Basis: M06.1; T-10.

Workbook: Separate indicator schedule; Evidence!G.

Attribute / ecological meaning r, t_0, t_1	Indicator, unit, boundary and period $x_{r,s,t} [u_r]$	Method, evidence status and limitations $\Delta x_{r,t}^{\text{add}}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Requested category specification, if applicable

PD-T22 / Calculation notation

$$n_t^{\text{candidate}} = \frac{J_t^{\text{cand}}}{d_u}, \quad d_u > 0, \quad J_t^{\text{cand}} \geq 0$$

d_u is t CO₂e per NVEU of the specified category. The quotient is a candidate count, not issuance or an equivalence with other external carbon units. No value for d_u or whole-unit rule is assumed. Missing category authorization blocks the unit count.

Basis: F-R04; U-01.

Workbook: Results!F:H; Profile!B7:B10.

Category / permitted claim category, t	Denomination and authorization record d_u	Uncertainty, durability and status controls $J_t^{\text{cand}}, n_t^{\text{candidate}}$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Limits on statements and aggregation

Distinguish ecosystem observations, projections, verified results and authorized NVEUs. Explain comparability limits and prevent duplicate or incompatible claims. An adopted carbon denomination is not implied by the acronym NVEU.

[Enter response and evidence references.]

13 Implementation plan, resources and contingencies

[1] Basis: S-11; S-13; S-25; CYC-05; P-02; FRM-07

Implementation work program

Activity, location and milestone	Implementer, mandate and resources	Schedule, dependency and evidence
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Resource and financial feasibility

PD-T24 / Calculation notation

$$c_{j,t} [u_c]$$

c is the recorded cost or resource amount in the explicitly identified currency and price date. Enter the actual budgeting equation and its data source if calculated. This label supplies no price, discount rate, financial formula, or emission factor.

Basis: CYC-03; CYC-04; CYC-05; data label.

Workbook: Project budget attachment; Evidence!G.

Cost / resource commitment j, t	Amount, currency, timing and source $c_{j,t}$	Funding status, sensitivity and contingency $\text{source}(c_{j,t})$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Operating, maintenance and incident arrangements

Record access, safety, capacity, maintenance, monitoring resources, disturbances, escalation and remedy responsibilities. NEBIOT performs its contracted technical services; the named implementer executes the interventions.

[Enter response and evidence references.]

14 Monitoring design and controlled change

[1] Basis: CYC-05; CYC-06; P-02; P-03; P-04; P-10; AO-08; FRM-02/AO

Variable-to-equation monitoring matrix

PD-T25 / Calculation notation

$$x_{\ell} [u_{\ell}]$$

x_{ℓ} is the identified observation, input, or output; u_{ℓ} is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Variable / equation / spatial support x_{ℓ}	Method, sampling, frequency and owner u_{ℓ}, t	Calibration, quality control and missing data source(x_{ℓ})
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Monitoring outputs and independent access

Describe field and remote evidence, laboratory custody, reporting periods, original-data retention, versioning and reproducible outputs. Link each reported variable to its module and calculation. Record independent OVV access arrangements.

[Enter response and evidence references.]

Disturbance response and revalidation triggers

Identify event detection, reversal notification, data gaps, changes in rights, methods or boundaries, additionality review and conditions requiring recalculation or revalidation. Preserve earlier versions and adverse findings.

[Enter response and evidence references.]

15 Application profile and parameter approvals

[1] Basis: S-18; T-01; T-14; T-20; F-03; U-01; FRM-05

Complete or attach FRM-05 for every applicable item. Each approved entry needs its rule or value, applicability, units where relevant, evidence, approving authority, effective date, version and review trigger. Unresolved entries identify the affected gate; blank cells are not defaults.

AP-01–AP-12 decision register

PD-T26 / Calculation notation

$$x_{\ell} [u_{\ell}]$$

x_{ℓ} is the identified observation, input, or output; u_{ℓ} is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

ID / decision topic x_{ℓ}	Rule / value / evidence / approval or affected gate u_{ℓ}, t
AP-01 / Activity and pool applicability	[Complete or reference the controlled FRM-05 entry]
AP-02 / Project dates and historical eligibility	[Complete or reference the controlled FRM-05 entry]
AP-03 / Crediting and durability horizons	[Complete or reference the controlled FRM-05 entry]
AP-04 / Baseline and additionality tests	[Complete or reference the controlled FRM-05 entry]
AP-05 / Classification and model criteria	[Complete or reference the controlled FRM-05 entry]
AP-06 / Sampling and monitoring	[Complete or reference the controlled FRM-05 entry]
AP-07 / Gas characterization	[Complete or reference the controlled FRM-05 entry]
AP-08 / Conservative uncertainty rule	[Complete or reference the controlled FRM-05 entry]
AP-09 / Risk reserve, remedy and negative results	[Complete or reference the controlled FRM-05 entry]
AP-10 / Assurance and materiality	[Complete or reference the controlled FRM-05 entry]
AP-11 / Governance and claims	[Complete or reference the controlled FRM-05 entry]
AP-12 / Safeguards and records	[Complete or reference the controlled FRM-05 entry]

16 Validation package and requirement crosswalk

[1] Basis: CYC-05; S-15; S-16; S-22; P-01; P-05; P-07; P-14; A-03; A-06; A-12; FRM-03; FRM-10

Independent design-validation scope

Identify the proposed or engaged OVV, competence and recognition evidence, independence record, criteria and version, assurance scope and unresolved conditions. Do not prepopulate a favorable opinion.

[Enter response and evidence references.]

Applicable requirement crosswalk

Requirement / version / applicability	Dossier location and exact evidence	Finding / response / independent closure
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Attach the complete applicable requirement matrix, not only these example rows. Use conforming, nonconforming, evidence insufficient, or not applicable with an accepted justification. A technical response is not independent closure; an assessment score cannot compensate for a failed mandatory requirement.

Findings, dissent and revision control

Record open and closed findings, rejected responses, conflicts, before/after calculations and the proposed version to be validated.

[Enter response and evidence references.]

17 Evidence, annexes and references

[1] Basis: F-01; S-17; P-04; A-05

Give every annex an identifier, version, date, custodian and exact location. Cite the source of every material input. Keep restricted supporting evidence separately accessible to authorized reviewers; do not hide the methodological basis of a claim.

Annex register

Annex / evidence ID	Contents and linked section	Custodian / access / version

Reproducibility and transfer

Identify the approved evidence package, calculation files, access arrangements and responsible custodian. Resolve all broken references before submission.

[Enter response and evidence references.]

18 Submission, review and stage decision

[1] Basis: CYC-01; CYC-05; S-16; S-22; S-23; FRM-03; FRM-06; A-12; A-13

Submission of the PD requests design validation. Validation, program registration, outcome verification and NVEU authorization are separate decisions. No blank field or signature confers any of these statuses.

Stage-exit review

Criterion	Evidence / section	Review finding
Complete design consistent with feasibility	[Complete]	[Not assessed]
Mandates, rights and safeguards supported	[Complete]	[Not assessed]
Methods, calculations and profile reproducible	[Complete]	[Not assessed]
Additionality and overlap dispositions documented	[Complete]	[Not assessed]
Monitoring, implementation and validation records ready	[Complete]	[Not assessed]

Separate records and signatures

Action / accountable role	Name, date and signature	Decision / scope / record
Submission / proponent	[Complete]	[Complete]
Technical preparation	[Complete]	[Complete]
Unconflicted review	[Complete]	[Complete]
Authorized stage decision	[Complete]	[Advance / correct / defer / decline]

Conditions, unresolved findings and next-stage handover

State the permitted scope, blocked activities or claims, corrective-action owner, evidence required, deadline under the approved profile and receiving party. A blank signature is not approval.

[Enter response and evidence references.]

A Ex-ante, ex-post and migration account attachments

[1] Basis: CYC-01; CYC-05; F-01; F-03; P-13; MIG-05; FRM-02; FRM-04; FRM-05

Stage-specific use

Freeze the design-stage ex-ante account as a PD annex. Define the ex-post report structure for monitoring and attach historical outcomes or a migration reconciliation where applicable. Updates preserve the original forecast and earlier decisions.

[Enter response and exact evidence references.]

Account attachment register

PD-T32 / Calculation notation

$x_\ell [u_\ell]$

x_ℓ is the identified observation, input, or output; u_ℓ is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Product / applicable scope x_ℓ	Version, workbook and evidence location u_ℓ, t	Status / reviewer / unresolved restriction $\text{source}(x_\ell)$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Common account contract

Use the bilingual Ex-Ante Estimate, Ex-Post Outcome Report and Migration Reconciliation formats with the calculation workbook as applicable. Identify periods, bands, units, missing data and exact source cells. Keep forecasts, monitored inputs, the counterfactual, verified results and authorized NVEUs distinct. No template rate or blank field establishes policy, zero emissions or issuance.

[Enter response and exact evidence references.]

Required reconciliation

PD-T33 / Calculation notation

$$\Delta q_{\text{basis}} = q^{\text{harm}} - q^{\text{src}}, \quad \Delta q_{\text{method}} = q^{\text{NEB}} - q^{\text{harm}}$$

$$q^{\text{NEB}} - q^{\text{src}} = \Delta q_{\text{basis}} + \Delta q_{\text{method}}$$

src retains the original result; harm is the original method on the agreed comparable basis; NEB is the receiving-method result on that basis. This telescoping identity explains differences, not eligibility. Do not force the methodological difference to zero.

Basis: MIG-05; P-13; reconciliation identity.

Workbook: Migration!E:K.

Dimension / original record <i>t, u</i>	Receiving or monitored treatment <i>q^{src}, q^{harm}, q^{NEB}</i>	Evidence and decision reference <i>Δq_{basis}, Δq_{method}</i>

CALC Calculation traceability and notation

[1] Basis: F-01; T-01; P-13; FRM-02; FRM-04; NEB-MTH-002

Record each calculated quantity as a uniquely identified row. Retain the exact source expression and a separate expression for any NEBIOT adaptation. A translated label does not change a formula. Units, included pools, sign convention, observation period, input status, and mathematical domain are part of the calculation record. An administrative table does not need an invented equation. Source-defined variables that remain ambiguous require clarification rather than an assumed meaning.

Indices and status

EA / EP: dated forecast / reporting-period account; t : interval; i, j : declared strata or classes; o : disjoint organ or pool; g : gas; τ : disturbance cohort; ℓ : calculation/component row.

One calculation record – repeat for each result

Field	Record
Calculation row / symbol	[Complete]
Definition and intended use	[Complete]
Exact source file / version / fingerprint	[Complete]
Worksheet / cell or raw record ID	[Complete]
Original expression and original unit	[Complete]
Inputs: symbols, values, units and periods	[Complete]
Receiving equation / standard identifier	[Complete]
Transformation, conversion and rationale	[Complete]
Unrounded intermediate and final values	[Complete]
Report table / row / output location	[Complete]
Recalculation difference / tolerance basis	[Complete]
Independent reviewer / finding / disposition	[Complete]

Arithmetic comparison, not materiality

$$\delta_{\ell} = v_{\ell}^{\text{recalc}} - v_{\ell}^{\text{reference}}$$

$$|\delta_{\ell}| \leq \varepsilon_a + \varepsilon_r |v_{\ell}^{\text{reference}}|$$

The absolute tolerance has the result unit; the relative tolerance is dimensionless. Record both explicitly. They are software-comparison settings, not approved materiality thresholds. Compare unrounded values. First reproduce the source method; then show each accepted change separately. Do not force an adapted methodological result to equal the source.
