Project document version: [Version]

Issue date: [YYYY-MM-DD]

Implementing organizations and stakeholders

IMPLEMENTING ENTITY

[Insert authorized logo]

[Organization / role]

PROJECT PROPONENT

[Insert authorized logo]

[Organization / role]

RIGHTS HOLDERS / STAKEHOLDERS

[Insert authorized logo]

[Organization / role]

Use authorized logos and identify each organization's actual role. Logo display does not establish consent, project ownership, endorsement, validation or admission. Remove unused partner spaces from the completed submission.

The English logo wording is a translation, not a separate legal entity.

License and use of this template

This document is issued by Nuevo Estándar Biotropical—NEBIOT S.A.S. Henry Arellano-Peña is the methodological author of NEB001 and NEB002. Rights in NEBIOT’s protected materials remain with their respective rights holders. Commercial use, reproduction, adaptation, redistribution, and sublicensing of protected material are subject to the applicable license or specific written permission from the authorized rights holder; permissions for use within the NEBIOT program shall be recorded in FRM-07 under S-21. Access to this document does not itself grant a commercial license, transfer ownership, authorize sublicensing, confer program admission, or authorize certification or issuance of environmental units. Supporting publications and third-party data, software, and images retain their respective licenses and attribution requirements; existing lawful permissions and uses permitted by applicable law remain unaffected. Authorized independent reviewers shall receive the access necessary for inspection, recalculation, and reporting under S-22, subject to the applicable permissions and confidentiality safeguards.

Completion instructions

This template organizes the evidence required for its project stage under NEBIOT Standard version 0.8.2. It does not replace the standard, its applicable methods, the approved case profile or the controlled forms. Complete the bracketed fields and expand tables or narrative areas as needed. For an inapplicable item, record a reason and the reviewer’s disposition; do not silently delete it. Identify unknown information as missing, not zero. Keep observations, assumptions, projections, verified outcomes and authorized NVEUs distinct. Requirements are assessed at the stage to which they apply; later-stage fields do not imply earlier completion.

Reference and scope

[1] NEBIOT. NEBIOT Standard, controlled version 0.8.2. NEB-DOC-000, integrated edition. Principal dependencies: NEB-CYC-001; NEB-STD-001 and Annex A; NEB-MTH-001/002; NEB-UNT-001; NEB-PRO-001; NEB-MIG-001; NEB-AUD-001; and NEB-FRM-001. All clause, equation, AP and FRM references in this template refer to that version. They are external normative dependencies, not missing sections of this template. NIP retains the source name Nota de Idea de proyecto; “Project Idea Note” is an explanatory English rendering. PD means Project Description. NEBIOT provides the contracted technical assessment, design and monitoring services. The named proponent and implementing entity retain project execution responsibilities under S-25; exceptional NEBIOT interests follow S-26.

01 NIP handover and study scope

[1] Basis: CYC-01; CYC-03; S-18; S-25; FRM-06; FRM-07

Prior-stage record

NIP / decision / evidence ID	Version and date	Conditions and closure evidence
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Study objective, alternatives and exclusions

Define the questions authorized for prefeasibility, the decision to be informed, geographic coverage and limits of the investigation. Explain any material change since the NIP.

[Enter response and evidence references.]

Responsibility and authorization register

Role	Entity / named lead	Mandate, scope and evidence
Project proponent	[Complete]	[Complete]
Rights holders	[Complete]	[Complete]
Implementing entity	[Complete]	[Complete]
NEBIOT technical lead	[Complete]	[Complete]

Work scope and access authority

Record contracted NEBIOT services, implementer information and evidence-access arrangements. Technical services do not transfer ownership or execution responsibility.

[Enter response and evidence references.]

02 Territory, baseline condition and spatial evidence

[1] Basis: S-03; S-06; S-07; MIG-13; MIG-14; FRM-04/M

Project map / spatial evidence

Insert a readable project map. Identify boundary version, coordinate reference system, scale, observation date, data source, legend and restrictions on disclosure. A screening map does not establish rights or an outcome boundary.

[INSERT PROJECT MAP]

Spatial-data passport

PREFEASIBILITY-T05 / Calculation notation

$$A_{i,t} = \frac{n_{i,t} a_{\text{cell}}}{k_A}, \quad k_A = 10^4 \text{ m}^2 \text{ ha}^{-1}$$

n is a pixel count; a_cell is pixel area in m2; A is area in ha. The PIXELS route uses the displayed geometric conversion. Direct area is a documented input. Net class change is not gross deforestation.

Basis: M01; MIG-13; MIG-14.

Workbook: Spatial!F:I; Profile!B15.

Product / release / band <i>i, t</i>	Units, support and observation dates <i>A_{i,t}, n_{i,t}, a_{cell}</i>	Processing, rights and applicability mask, scope
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Forest definition, ecosystems and temporal gaps

Describe provisional strata, forest definitions, exclusions and the distinction between tree-cover disturbance and land-use deforestation. Identify missing time intervals and reference evidence.

[Enter response and evidence references.]

03 Alternatives, drivers and initial additionality

[1] Basis: S-08; S-09; AO-05; AO-06; AO-07; AO-10; FRM-01/AO

Plausible alternatives

Alternative / activity / spatial support	Legal and practical credibility	Evidence, barriers and remaining test
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Drivers and intervention mechanism

Connect each proposed intervention to the driver or constraint it is intended to alter. Separate present land use, preparatory activities and anticipated conversion. Do not assume one threat applies uniformly to the territory.

[Enter response and evidence references.]

Applicable additionality tests and existing activity

Identify the proposed tests, common practice, relevant legal duties, financial questions where applicable, and prior interventions already affecting the counterfactual. State evidence needed for feasibility.

[Enter response and evidence references.]

04 Method selection and feasibility investigation

[1] Basis: S-01; S-02; T-11; T-12; T-13; MIG-15; MIG-16; FRM-08

Method and evidence-route comparison

PREFEASIBILITY-T07 / Calculation notation

$$x_{\ell} [u_{\ell}]$$

x_{ℓ} is the identified observation, input, or output; u_{ℓ} is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Module / candidate route A, B or C x_{ℓ}	Evidence retained or required u_{ℓ}, t	Tests, limitations and resources $\text{source}(x_{\ell})$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Feasibility field and laboratory plan

PREFEASIBILITY-T08 / Calculation notation

$$W_i = \frac{A_i}{A}, \quad \hat{p}_{ij} = \frac{n_{ij}}{n_i}, \quad \hat{A}_j = A \sum_i W_i \hat{p}_{ij}$$

Use the sampling design and domain required by M01.4. W_i is the mapped stratum weight, not an estimated weight by default; n_{ij} and n_i are reference counts. This upstream estimator is not fitted by the account workbook.

Basis: M01.4; M01.5; T-03.

Workbook: Evidence!G; Spatial!!; qualified upstream calculation.

Variable / population / stratum i, j, n_i	Sampling or qualified reuse plan $W_i, \hat{p}_{ij}$	Quality controls / independent test $\hat{A}_j$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Route A concerns a new material reference; B concerns a qualified reusable calibration library; C concerns qualified secondary evidence or a supported conservative account. The selected claim and evidence determine the work required; repeating the entire research program is not automatic.

Choice recommended for detailed investigation

Explain the preferred option and alternative if the evidence fails. Record work that must precede a defensible quantity estimate.

[Enter response and evidence references.]

05 Indicative environmental account and sensitivity

[1] Basis: F-01; F-02; S-10; S-11; T-09; T-14; U-01; U-02

Scenario account

PREFEASIBILITY-T09 / Calculation notation

$$\widehat{Q}_t^z = N_{BL,t}^z - N_{PJ,t}^z - L_t^z, \quad z \in \{EA, EP\}$$

EA denotes the dated forecast; EP denotes the reporting-period account, not automatic verification. All terms are signed period masses on matched support. The quantity is before uncertainty, previous liabilities, reserve, and denomination.

Basis: M04.5; F-R01.

Workbook: ExAnte!F:l; ExPost!F:l.

Component / equation ID t, z	Value or range, unit and period $N_{BL,t}^z, N_{PJ,t}^z, L_t^z$	Evidence, assumptions and status $\widehat{Q}_t^z$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Sensitivity and uncertainty drivers

PREFEASIBILITY-T10 / Calculation notation

$$u_Q^2 = u_B^2 + u_P^2 + u_L^2 - 2 \text{Cov}(B, P) - 2 \text{Cov}(B, L) + 2 \text{Cov}(P, L)$$

B, P and L in this variance identity denote baseline, project and leakage estimators, not reserve B_t. Standard uncertainties are in t CO₂e; variances and covariances are squared units. Retain shared-source dependence and a valid covariance matrix.

Basis: F-U01; M05.1; M05.2.

Workbook: Qualified uncertainty calculation; ExAnte!J:L; ExPost!J:L.

Input or structural assumption B, P, L	Supported alternative / effect $u_B, u_P, u_L, \text{Cov}$	Required evidence / consequence u_Q^2, Q_t^{low}
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Separate stocks, annual flows and cumulative changes; carbon, carbon dioxide and CO₂-equivalent quantities; modeled and observed outcomes. Distinguish uncertainty, prior liabilities and prospective reserve. No default rate, period or denomination is supplied by this template.

Unquantified scope

Identify quantities that remain unsupported and the implications for the next decision.

[Enter response and evidence references.]

06 Rights, safeguards, overlap and migration screening

[1] Basis: S-04; S-05; S-12; S-13; AO-01; AO-04; AO-11; MIG-02; MIG-03

Rights and safeguard work plan

Right / affected group / issue	Evidence and consultation status	Action, owner and timing
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Overlap and historical-account screening

Initiative / area / period	Earlier interventions and claims	Disposition / required reconciliation
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Migration applicability and next evidence

Identify originating program and method versions, rights, monitoring and verification history, other external carbon units, reversals and reserve obligations where applicable. Preserve original records.

[Enter response and evidence references.]

07 Risk, resources and implementation constraints

[1] Basis: S-11; S-13; S-25; T-17; T-18; T-20; FRM-09

Preliminary risk register

PREFEASIBILITY-T13 / Calculation notation

$$B^{\text{req}} = \inf\{\ell : \Pr(L_H \leq \ell \mid \mathcal{D}_v) \geq \gamma\}$$

$$B^{\text{add}} = \max(0, B^{\text{req}} - B^{\text{avail}})$$

This is conditional F-A04, not a default probability model. Record the adopted horizon, protection level and loss distribution, or the separately justified stress route. Distinguish total required protection, available compatible reserve and new contribution. No rate is prefilled.

Basis: F-A04; F-A05; T-17–T-20; AP-09.

Workbook: Qualified risk schedule; Settlement!J; FRM-09.

Risk / exposed scope L_H, H	Evidence and plausible consequence $\gamma, B^{\text{req}}, B^{\text{avail}}$	Proposed control / responsible entity B^{add}
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Resource and cost assumptions

PREFEASIBILITY-T14 / Calculation notation

$$c_{j,t} [u_c]$$

c is the recorded cost or resource amount in the explicitly identified currency and price date. Enter the actual budgeting equation and its data source if calculated. This label supplies no price, discount rate, financial formula, or emission factor.

Basis: CYC-03; CYC-04; CYC-05; data label.

Workbook: Project budget attachment; Evidence!G.

Task / cost category j, t	Amount, currency, date and basis $c_{j,t}$	Funding status / sensitivity $\text{source}(c_{j,t})$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Implementability constraints

Describe access, safety, capacity, seasonal constraints, maintenance, benefit-sharing and monitoring funding. Do not present assumed revenue, fees or risk probabilities as approved values.

[Enter response and evidence references.]

08 Feasibility work program and recommendations

[1] Basis: CYC-03; CYC-04; S-16; S-18; FRM-05

Material gaps and closure plan

Gap / blocked decision	Investigation and acceptance evidence	Owner / sequence / resources
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Recommended design and alternatives retained

State the supported route to feasibility, what would lead to redesign or termination, and which quantities, rights or safeguards remain unresolved.

[Enter response and evidence references.]

Feasibility mandate

Define deliverables, responsible parties, access permissions, budget basis and intended review. Approval of the study scope is not approval of future environmental quantities.

[Enter response and evidence references.]

09 Evidence, annexes and references

[1] Basis: F-01; S-17; P-04; A-05

Give every annex an identifier, version, date, custodian and exact location. Cite the source of every material input. Keep restricted supporting evidence separately accessible to authorized reviewers; do not hide the methodological basis of a claim.

Annex register

Annex / evidence ID	Contents and linked section	Custodian / access / version
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Project-specific references

Reference ID	Full citation / exact version	Use in this dossier
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Reproducibility and transfer

Identify the approved evidence package, calculation files, access arrangements and responsible custodian. Resolve all broken references before submission.

[Enter response and evidence references.]

10 Submission, review and stage decision

[1] Basis: CYC-01; CYC-03; S-16; S-22; S-23; FRM-03; FRM-06; A-12; A-13

Prefeasibility supports a decision on detailed investigation. Its estimates remain indicative and do not replace field or qualified secondary evidence, validation or verification.

Stage-exit review

Criterion	Evidence / section	Review finding
NIP conditions and study scope reconciled	[Complete]	[Not assessed]
Plausible alternatives and drivers assessed	[Complete]	[Not assessed]
Evidence routes and feasibility tests specified	[Complete]	[Not assessed]
Rights, safeguards, risks and overlaps recorded	[Complete]	[Not assessed]
Credible gap-closure and resource plan provided	[Complete]	[Not assessed]

Separate records and signatures

Action / accountable role	Name, date and signature	Decision / scope / record
Submission / proponent	[Complete]	[Complete]
Technical preparation	[Complete]	[Complete]
Unconflicted review	[Complete]	[Complete]
Authorized stage decision	[Complete]	[Advance / correct / defer / decline]

Conditions, unresolved findings and next-stage handover

State the permitted scope, blocked activities or claims, corrective-action owner, evidence required, deadline under the approved profile and receiving party. A blank signature is not approval.

[Enter response and evidence references.]

A Ex-ante, ex-post and migration account attachments

[1] Basis: CYC-01; CYC-05; F-01; F-03; P-13; MIG-05; FRM-02; FRM-04; FRM-05

Stage-specific use

Use the Ex-Ante Estimate for supported alternatives and sensitivities. Map existing ex-post or migrated records to the evidence plan; do not require a current result where only a forecast exists.

[Enter response and exact evidence references.]

Account attachment register

PREFEASIBILITY-T20 / Calculation notation

$x_\ell [u_\ell]$

x_ℓ is the identified observation, input, or output; u_ℓ is its declared unit. Record the exact equation and source file, worksheet, cell/range, period, and status. This notation does not prescribe an estimator.

Basis: F-01; T-01.

Workbook: Evidence!A:J; Components!F:L.

Product / applicable scope x_ℓ	Version, workbook and evidence location u_ℓ, t	Status / reviewer / unresolved restriction $\text{source}(x_\ell)$
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

Common account contract

Use the bilingual Ex-Ante Estimate, Ex-Post Outcome Report and Migration Reconciliation formats with the calculation workbook as applicable. Identify periods, bands, units, missing data and exact source cells. Keep forecasts, monitored inputs, the counterfactual, verified results and authorized NVEUs distinct. No template rate or blank field establishes policy, zero emissions or issuance.

[Enter response and exact evidence references.]

Required reconciliation

PREFEASIBILITY-T21 / Calculation notation

$$\Delta q_{\text{basis}} = q^{\text{harm}} - q^{\text{src}}, \quad \Delta q_{\text{method}} = q^{\text{NEB}} - q^{\text{harm}}$$

$$q^{\text{NEB}} - q^{\text{src}} = \Delta q_{\text{basis}} + \Delta q_{\text{method}}$$

src retains the original result; harm is the original method on the agreed comparable basis; NEB is the receiving-method result on that basis. This telescoping identity explains differences, not eligibility. Do not force the methodological difference to zero.

Basis: MIG-05; P-13; reconciliation identity.

Workbook: Migration!E:K.

Dimension / original record <i>t, u</i>	Receiving or monitored treatment <i>q^{src}, q^{harm}, q^{NEB}</i>	Evidence and decision reference <i>Δq_{basis}, Δq_{method}</i>
[Complete]	[Complete]	[Complete]
[Complete]	[Complete]	[Complete]

CALC Calculation traceability and notation

[1] Basis: F-01; T-01; P-13; FRM-02; FRM-04; NEB-MTH-002

Record each calculated quantity as a uniquely identified row. Retain the exact source expression and a separate expression for any NEBIOT adaptation. A translated label does not change a formula. Units, included pools, sign convention, observation period, input status, and mathematical domain are part of the calculation record. An administrative table does not need an invented equation. Source-defined variables that remain ambiguous require clarification rather than an assumed meaning.

Indices and status

EA / EP: dated forecast / reporting-period account; t : interval; i, j : declared strata or classes; o : disjoint organ or pool; g : gas; τ : disturbance cohort; ℓ : calculation/component row.

One calculation record – repeat for each result

Field	Record
Calculation row / symbol	[Complete]
Definition and intended use	[Complete]
Exact source file / version / fingerprint	[Complete]
Worksheet / cell or raw record ID	[Complete]
Original expression and original unit	[Complete]
Inputs: symbols, values, units and periods	[Complete]
Receiving equation / standard identifier	[Complete]
Transformation, conversion and rationale	[Complete]
Unrounded intermediate and final values	[Complete]
Report table / row / output location	[Complete]
Recalculation difference / tolerance basis	[Complete]
Independent reviewer / finding / disposition	[Complete]

Arithmetic comparison, not materiality

$$\delta_{\ell} = v_{\ell}^{\text{recalc}} - v_{\ell}^{\text{reference}}$$

$$|\delta_{\ell}| \leq \varepsilon_a + \varepsilon_r |v_{\ell}^{\text{reference}}|$$

The absolute tolerance has the result unit; the relative tolerance is dimensionless. Record both explicitly. They are software-comparison settings, not approved materiality thresholds. Compare unrounded values. First reproduce the source method; then show each accepted change separately. Do not force an adapted methodological result to equal the source.
